AFTERCARE

After Your Acne Facial

Clear skin is built at home between visits. Be gentle, be consistent, and give your routine time to work.

YOUR LOGO

WHEN	WHAT'S NORMAL	DO	AVOID
Day 0 first 24 hours	Pinkness, mild tingling, and small red marks where pores were cleared.	Wash tonight with lukewarm water and a gentle cleanser. Oil-free moisturizer. SPF 30+ outdoors.	Makeup for 12–24 hours, picking, sweaty workouts, sauna and pools.
Days 2–3	Some dryness. A few small whiteheads may surface.	Restart your acne products on the night I told you. Moisturize if you feel dry.	Scrubs, extra acids or new products. Don't layer actives we didn't plan.
Weeks 1–4	Breakouts come and go. Dryness or peeling while skin adjusts to your products.	Use your routine every day, as directed. Benzoyl peroxide can bleach towels and pillowcases: use white ones.	Stopping and starting products, or switching every week. Give each one time.
Weeks 6–12	Fewer new breakouts. Dark marks fade slowly; that can take months.	Keep going and keep your facial visits. SPF every day, tinted if you get dark marks.	Tanning, which deepens marks. Squeezing, which can scar.

Hands off
Picking leaves dark marks and scars.

Every day
Consistency beats strength. Give it 6–12 weeks.

SPF daily
Broad-spectrum 30+ keeps marks from darkening.

Keep it clean
Fresh pillowcase, phone and makeup brushes.

CALL ME, OR SEE A DERMATOLOGIST, IF YOU NOTICE

- Deep, painful lumps or cysts
- Acne that leaves scars or keeps getting worse
- Signs of infection: warmth, oozing, crusts
- Burning, swelling or a rash from products
- No improvement after about 3 months
- You become pregnant or plan to

Trouble breathing, or swelling of the face or throat: call 911.
