AFTERCARE

Caring for Your Skin After a Peel

Fresh skin is delicate for about a week. Here's what to expect day by day, and how to protect your results.

YOUR LOGO

WHEN	WHAT'S NORMAL	DO	AVOID
Day 0 today	Pinkness for a few hours, tightness, a little warmth.	Wash tonight with lukewarm water and the gentle cleanser we chose. Moisturize. SPF if you go outside.	Makeup until I say it's OK, heat and sweating.
Days 1–2	Tight, dry, slightly pink skin. Flaking may begin around day 2.	Moisturize at least twice a day. SPF 30+ every morning, and reapply outdoors.	Hot showers on your face, sauna, steam, hot tubs, swimming, hard workouts and scrubs.
Days 3–5 peak peeling	The most flaking and peeling, and some mild itching.	Keep moisturizing. Snip loose flakes with clean, small scissors if they bother you.	Picking or pulling skin (it can leave dark marks), retinol, acids, waxing and hair-removal cream.
Days 6–7	Peeling winds down and your new skin looks fresh and smooth.	Stay gentle and keep up your SPF.	Exfoliants, active serums and facial waxing for one more day or two.
Week 2+	Healed. Tone keeps evening out over the next few weeks.	Once flaking has fully stopped, restart your retinol and actives as planned. SPF every day.	Tanning for 2 weeks, and other treatments until I've checked your skin.

SPF daily
Broad-spectrum 30+, rain or shine.

Hands off
Let flakes fall on their own.

Stay cool
Lukewarm water, no heat or sweat for 48 hours.

Keep it simple
Cleanser, moisturizer, SPF. That's it for a week.

CALL ME RIGHT AWAY IF YOU NOTICE

- Blisters, oozing, yellow crusts or pimples that look infected
- Burning or itching that doesn't stop
- Dark patches, or redness lasting more than 1–2 weeks
- Pain or swelling that gets worse instead of better
- A cold sore or a cluster of small blisters
- Hives or any sign of an allergic reaction

Trouble breathing, or swelling of the face or throat: call 911.
