AFTERCARE

Caring for Your Tinted Brows

Brow tint colors your hairs, and henna also stains the skin underneath. Here's what to expect, and how to keep your color fresh for longer.

YOUR LOGO

WHEN	WHAT'S NORMAL	DO	AVOID
First 24–48 hours keep dry	Brows look bolder and more defined than they will settle. A little pinkness from shaping fades within hours.	Keep brows dry for 24 hours (henna: 24 to 48). Wash around them with a damp cloth and pat, don't rub.	Brow makeup for 24 hours, steam, saunas, sweaty workouts, swimming and oil cleansers.
Days 2–14 skin stain fades	Tint stain on the skin is gone in 1 to 2 days. Henna stain fades gradually over up to 2 weeks, faster on oily skin.	Cleanse gently with a mild, oil-free cleanser and pat dry. Brow pencil or gel is fine if you want extra fullness.	Scrubs, peels, retinol, AHA or BHA on your brows, and rubbing them with a towel.
Weeks 3–6 hair color fades	Hair color softens and new hairs grow in uncolored. Tint lasts about 3 to 6 weeks, henna about 4 to 6.	Rebook for fresh color and a tidy-up before the shape grows out. Shade your brows from strong sun.	Box dyes or home tint kits near your eyes. They aren't made for the eye area.

If you had brow tint

Colors the hairs only, for depth and definition. Skin stain: 1 to 2 days. Hair color: about 3 to 6 weeks.

If you had henna brows

Colors hairs and stains skin for a filled-in look. Skin stain: up to 2 weeks. Hair color: about 4 to 6 weeks.

GOOD TO KNOW

- Sun, tanning beds, chlorine and salt water fade color
- Retinol and acids near brows fade color quickly
- A reaction can happen even after past tints
- Oily skin holds the skin stain for less time
- Tell me about new skincare or medication
- We patch test again if the product changes

Stay dry

No water on brows for 24 hours, 48 for henna.

Go gentle

Oil-free cleanser, pat dry, no scrubbing.

Skip the acids

Keep retinol, AHA and BHA off your brows.

Sun safe

Sun and tanning fade color; wear a hat.
