THE PMU COLLECTION

PMU Client Forms, Protocols & Aftercare

Written by a licensed esthetician. Every page edits in a free Canva account, in US Letter and A4.

What's inside

CLIENT FORMS

Client intake & health history (2 pages)
Brow mapping & design approval
General PMU consent
Patch test consent & record
Photo & media release
Deposit, touch-up & cancellation policy
Procedure & pigment record
Touch-up / perfecting session form

TREATMENT SETS

Consent, protocol & healing-timeline aftercare for: microblading, powder & ombré brows, lip blush, eyeliner & lash enhancement, saline removal, scalp micropigmentation, areola restoration, faux freckles

CLIENT TAKEAWAYS

Pre-appointment prep sheet
Healing stages guide
Aftercare cards (4 × 6 in)

BUSINESS TOOLS

Contraindication chart
Color theory cheat sheet
Adverse reaction & incident report
Bloodborne pathogens & sanitation log

How to make them yours

1. In a free Canva account, click Create, then Upload, and choose this PDF.
2. Canva turns every page into an editable design.
3. Add your logo, business name and colors.
4. Download as PDF to print, or fill in on a tablet.

BEFORE YOU USE THESE

These templates are a starting point, not legal or medical advice. PMU licensing and scope vary by state and county: some areas restrict tattooing near the eye or require medical clearance for areola work. Check your local rules, set each waiting period to your own policy, and have a local attorney review your forms.

Rather go paperless?

Send, sign and store every one of these forms from your phone with SlickChart.

Agreement

	Initials
My answers are true and complete. I'll tell you before every visit if my health, medications or skincare change.	
Results vary with skin type, sun, skincare and healing. No exact result or color has been promised.	
PMU is a process. A perfecting touch-up is usually needed 6 to 10 weeks after the first session.	
I'll follow my aftercare instructions. Skipping them can cause infection, scarring or poor color retention.	
I'll keep to the waiting periods that apply to me and get my doctor's clearance if asked.	
Before and after photos will be taken for my client record.	
I am 18 or older and will show a valid government photo ID.	

Your privacy: your information is kept confidential, stored securely and used only to provide your services. It is never shared without your written consent unless the law requires it. Records are kept [7] years.

INFORMED CONSENT & RELEASE · PERMANENT MAKEUP

General PMU Consent

CLIENT NAME _____

BIRTH DATE _____ DATE _____ PROCEDURE(S) I'M CONSENTING TO _____

WHAT PMU IS
Pigment placed in the upper layers of skin with a needle or blade. It fades over 1 to 5 years and needs color boosts.

WHAT TO EXPECT
Redness and swelling for a few days, then flaking. Color looks dark at first, then lighter, then settles over 4 to 8 weeks.

NUMBING
A topical numbing cream may be used where local rules allow. Most clients feel scratching or pressure.

Possible risks

Infection. Rare with sterile tools and good aftercare. Watch for spreading redness, heat, pus or fever.

Allergic reaction. To pigment, numbing cream or balm. Can be delayed, appearing months or years later.

Uneven or asymmetric results. Skin heals unevenly. Some areas may need a touch-up to even out.

Color change over time. Pigment fades and can shift cooler, ashy, pink or warm with sun and skincare.

Migration or blurring. Pigment can spread beyond the lines, more often on oily or thin skin.

Scarring. Raised or textured skin, more likely if you form keloids or pick scabs.

Granuloma. Firm bumps that can form around pigment weeks or months later.

Koebner reaction. Psoriasis, vitiligo or lichen planus may flare in the treated skin.

Swelling, redness, bruising. Common for a few days. Lips and eyes swell more.

Removal is hard. Lightening or removal takes several sessions and can leave marks.

MRI: iron oxide pigments can rarely cause warmth or swelling in the area during an MRI. Tell your radiologist you have PMU. Never skip an MRI because of it. Laser treatments near PMU can darken the pigment, so tell any laser provider too.

Results depend on your skin type and tone, oiliness, age, health, medications, sun exposure, skincare and how closely you follow aftercare. Most clients need a perfecting touch-up 6 to 10 weeks later.

Please initial each statement

	Initials
I've read the risks above and had my questions answered. No specific result has been promised to me.	
My health history is true. I'm not pregnant or breastfeeding, and I've listed all my medications.	
I understand PMU is semi-permanent, fades unevenly, and needs a touch-up and future color boosts.	
I approved my design and color before the procedure started.	
I'll follow aftercare and contact you, and a healthcare provider, if signs of infection or allergy appear.	
I've been offered a patch test and either completed it or signed the patch test waiver.	
I understand removal or correction, if ever needed, costs extra and may take several sessions.	
I release [Your Business Name] from claims caused by details I didn't share or aftercare I skipped, as [State] law allows.	
I am 18 or older, not under the influence of alcohol or drugs, and signing of my own free will.

CLIENT RECORD · CONSENT & WAIVER

Patch Test Consent & Record

YOUR LOGO

CLIENT NAME | PHONE | PLANNED PROCEDURE

KNOWN ALLERGIES OR SENSITIVITIES | APPOINTMENT DATE

ABOUT YOUR PATCH TEST

A tiny amount of the pigment and numbing product planned for you is placed on a small area, usually behind the ear or on the inner arm. Check it at 24 to 48 hours, and again at 7 days for a final check. A clear test lowers the risk of a reaction but can't rule one out: reactions to pigment can appear months or even years later.

Products tested

Pigment / product	Color	Lot #	Test area	Date · time	Applied by

Checks

Check	None	Redness	Itching	Swelling	Bumps	Notes · date · checked by	Initials
24–48 hrs	☐	☐	☐	☐	☐		
7 days	☐	☐	☐	☐	☐		

RESULT ☐ Clear to proceed ☐ Proceed with a different product ☐ Do not proceed; refer to physician

I consent to this patch test. If the spot burns, blisters, swells or itches badly, I'll wash it with cool water and call [Phone]. If I have trouble breathing or swelling of the face or throat, I'll call 911.

CLIENT SIGNATURE | DATE | ARTIST INITIALS

or

I decline the patch test

I was offered a patch test and chose not to have one. I understand this means an allergy to the pigment or numbing product won't be found before my procedure, and that a reaction could need medical care, affect my results, or mean the pigment has to be removed. I accept these risks and release [Your Business Name] from claims related to a reaction a patch test might have shown, as far as [State] law allows.

PERMANENT MAKEUP · YOUR CHOICE, EVERY TIME

PMU Photo & Media Release

YOUR LOGO

CLIENT NAME | PHONE OR EMAIL | DATE

Photos record your PMU before, during and after each session. Sharing them is a separate choice. Saying no never affects your care, and you can change your answers at any time.

Your choices

		Yes	No
1	**Clinical record** Before, after and healed photos in my private file to plan and track my work. Never shared.	REQUIRED	
2	**Portfolio: before and after** Shown on your website, in print or in a studio portfolio book to show your work.	☐	☐
3	**Social media** Posted on your business social accounts, including short videos and reels.	☐	☐
4	**How much of my face may be shown** If yes to 2 or 3, choose one. I will see any image before it is posted.	☐ Cropped to the treated area ☐ Full face visible	
5	**Testimonial, name or tag** You may quote my review, use my first name, or tag my social handle with my photos.	☐	☐

NAME OR HANDLE TO USE (IF 5 IS YES) | LIMITS (AREAS, PLATFORMS, DATES)

Areola photos stay in your record only and never show your face, unless you opt in separately in writing.

How your photos are handled

STORAGE
Taken on a business device and kept in [your secure app or system], not a personal camera roll. Record photos are kept with your file for [7] years.

CHANGING YOUR MIND
Tell me in writing (text or email is fine). I'll stop new use and remove posts I control within [7] days. Printed items and others' shares may be out of my reach.

NO PAYMENT
This release is voluntary. You won't receive payment, royalties or free services for photos or reviews.

HONEST IMAGES
Photos aren't filtered or retouched to change results. Same lighting and angle for before and after.

By signing, I confirm my choices above. This release stays in effect until I change or withdraw it in writing.

DEPOSIT · TOUCH-UP · CANCELLATION

PMU Booking & Touch-up Policy

YOUR LOGO

Permanent makeup takes careful planning, and your appointment is a long block reserved just for you. These policies keep things fair and help you get the best healed result.

DEPOSIT
[$100]
Due at booking to hold your time. Non-refundable; applied to your total.

NOTICE TO CHANGE
[48–72] hours
To move your appointment and keep your deposit.

GRACE PERIOD
[15] minutes
After that, we may need to reschedule.

Rescheduling	With [48–72] hours' notice, your deposit transfers once. A second change needs a new deposit.
Deposit forfeited	For a no-show, a late change, or arriving with a health issue you didn't disclose (such as pregnancy, recent Botox, isotretinoin or sunburn) that means we can't safely proceed.
Late arrival	After [15] minutes, the full service may not fit. We may reschedule, and the deposit is forfeited.
Feeling unwell?	Fever, cold or flu, or an active cold sore before lip work? Tell us as soon as you can and we'll reschedule with no fee.
Perfecting touch-up	Included when booked within [6–10] weeks of your first session. Not before 6 weeks: your skin needs to fully heal.
Later touch-ups	From [10] weeks to 6 months: touch-up rate of [$___]. After 6 months, priced as a color boost or new service.
Color boost	Recommended every [12–18] months at [30–50]% of the original price. After [2–3] years, full price.
Another artist's work	Consultation and photos first. Priced as a correction, and may need lightening or removal before new work.
Results	Not guaranteed. Skin type, oiliness, sun, skincare, medications and aftercare all affect how pigment heals and lasts.
Refunds	PMU can't be refunded once performed. Concerns about healing are assessed and addressed at your touch-up.

CARD ON FILE FOR DEPOSITS AND FEES, CHARGED ONLY AS DESCRIBED ABOVE

☐ Card saved in [booking system] ☐ I prefer to prepay Never write card numbers on this form.

By signing, I confirm I've read and agree to this policy, including the non-refundable deposit and touch-up timing.

CLIENT ACKNOWLEDGMENT

My health answers above are true and complete. My original consent still applies. I understand that touch-up timing and pricing follow [Your Business Name]'s policy: my first perfecting session is included within [6–10] weeks, and later touch-ups are priced per policy. Results are not guaranteed, and some clients need more than one touch-up.

CLIENT SIGNATURE | DATE | ARTIST SIGNATURE | DATE

INFORMED CONSENT

Microblading Consent

YOUR LOGO

CLIENT NAME _____ ARTIST _____ DATE _____

WHAT IT IS

A single-use hand blade places fine, hair-like strokes of pigment just under the skin.

WHAT TO EXPECT

About 2 to 3 hours. A touch-up at 6 to 8 weeks (not before 6, ideally within 12) is part of the process.

HOW LONG IT LASTS

Usually 1 to 3 years. Very oily or large-pore skin blurs strokes and often suits powder brows better.

POSSIBLE RISKS AND SIDE EFFECTS

- Strokes that blur or merge, more so in oily skin
- Uneven fading or asymmetry, refined at touch-up
- Allergy to pigment or numbing, even months later
- Granulomas (firm bumps), which are rare
- Color change as it fades (cooler or warmer)
- Scarring or texture change if skin is damaged
- Infection, especially without good aftercare
- Koebner reaction (psoriasis or vitiligo flaring)

MRI: iron-oxide pigments can rarely cause warmth or swelling. Tell the radiologist; never skip an MRI because of PMU.

Quick health check

- Pregnant or breastfeeding
- History of keloids
- Retinol or acids on brows in 14 days
- Sunburn or a tan on the area
- Previous brow tattoo or PMU
- Accutane in the past 12 months
- Chemo or radiation in 6 months
- Botox in the past 2 weeks
- Diabetes, autoimmune or heart issue
- Fainting, epilepsy or pacemaker
- Cold sore, rash or acne near brows
- Bleeding disorder or blood thinners
- Peel, laser or microneedling in 4 wks
- Allergy: pigment, numbing, latex
- Psoriasis, eczema or vitiligo

☐ **None of these apply to me** or list any that do: _____

Design and color approval. I've seen my brow shape drawn on in a mirror and approve the shape, placement and pigment color. ☐

Please initial each statement

	Initials
I've shared my full health, medication and skincare history honestly, and will report any changes.	
I understand the risks above. Results vary with skin type, age, sun and healing, and aren't guaranteed.	
My brows will look dark, then patchy or almost gone (ghosting) before color returns at 4 to 6 weeks.	
A touch-up at 6 to 8 weeks is usually needed; some strokes may not hold the first time. [Your terms.]	
I'll follow my aftercare. Picking, sun, sweat or skipping it can cause fading, scarring or infection.	
This is semi-permanent. It fades but may not disappear completely, and removal isn't guaranteed.	
Before and after photos for my private record are required. Social media use only with my separate OK.	
Deposits and fees follow [Your Business Name] policy. Services can't be refunded once performed.	

By signing, I confirm I am 18 or older, have shown government photo ID, have read this form, had my questions answered, and consent to microblading and my touch-up.

CLIENT SIGNATURE _____ DATE _____ ARTIST SIGNATURE · LICENSE # _____ DATE _____

PRACTITIONER PROTOCOL

Microblading

Follow your state and local body-art rules and your pigment and numbing labels. Times are typical.

SCREEN

Intake cleared, photo ID (18+). Very oily or large-pore skin: suggest powder brows.

PATCH TEST

Offered 24 to 48 hours ahead, 7-day final check. Waiver if declined.

PRE-CARE SENT

No retinoids or acids 14 days, non-prescribed thinners 7 days, alcohol 48 hours.

SET UP FIRST

- ☐ BBP precautions, PPE on
- ☐ Barrier film on bed, lamp, machine
- ☐ Sharps container in reach
- ☐ Sealed single-use blade, opened in view
- ☐ Pigment decanted to a single-use cup
- ☐ Brand, color, lot, expiry recorded
- ☐ Sterile gauze & saline eyewash
- ☐ Mirror, mapping tools, timer

#	STEP	TIME	HOW
1	**Consult & screen**	10–15 min	Confirm health changes. Assess skin type, hair, old PMU. Defer if needed.
2	**Consent & photos**	5 min	Consent signed. Photos front, both sides and 45°, even light.
3	**Mapping & approval**	20–30 min	Map to bone structure. Client approves in a mirror and initials.
4	**Numbing**	20–30 min	Topical only as state rules and label allow. Record product, times.
5	**Pigment selection**	5 min	Match undertone and Fitzpatrick; brows heal cooler. Record lot.
6	**Prep**	2 min	Remove numbing, antiseptic prep, keep map visible. Stretch firmly.
7	**Strokes**	45–60 min	Follow the map. Superficial, consistent strokes; too deep blurs or scars.
8	**Wipe & assess**	Ongoing	Sterile gauze. Check symmetry, clarity. Second pass only where needed.
9	**Secondary numbing**	If used	Only on opened skin, only if state rules and the label permit.
10	**After photos**	5 min	Client mirror check. Same angles and light as the before photos.
11	**Aftercare & touch-up**	5 min	Blot, thin balm, review sheet and card. Book touch-up at 6 to 8 weeks.

ENDPOINT AND SAFETY

- Crisp, even strokes; pinpoint bleeding at most
- Fitzpatrick IV–VI: lighter hand, scar risk
- Excess bleeding or swelling: pause, reassess
- Thin or oily skin: fewer passes, or shade

IF SOMETHING GOES WRONG

- Hives, wheezing or swelling: stop, remove product. Call 911 if breathing is affected.
- Fainting or dizziness: stop, lay the client flat, raise legs, monitor. 911 if slow to recover.
- Needlestick or blood exposure: follow your written exposure control plan.
- Heavy bleeding: stop, firm pressure with sterile gauze. End the session if it doesn't settle.
- Pigment or numbing in the eye: flush with saline; same-day eye care if irritation continues.
- Later spreading redness, pus or fever: refer the client to a physician.

Always write an incident report and check in with the client within 24 to 48 hours.

RECORD FOR THIS SESSION

Pigment · color	Lot · expiry	Blade configuration	Numbing · times applied
Passes · skin response	**Bleeding · swelling**	**Retention notes**	**Touch-up date · initials**

AFTERCARE

Caring for Microbladed Brows

Your brows will change a lot over the next 6 to 8 weeks. Here's what to expect, and how to help the strokes heal crisp.

YOUR LOGO

WHEN	WHAT'S NORMAL	DO	AVOID
Day 0 today	Dark, bold brows, slight swelling and clear fluid (lymph).	Blot gently with sterile gauze every 15 to 20 minutes for 2 to 3 hours. Sleep on your back.	Touching, makeup, workouts and getting your brows wet.
Days 1–3	Brows look darker and thicker than they will heal. Mild tenderness.	Cleanse 1 to 2 times a day with water or a fragrance-free cleanser. Pat dry, then a rice-grain of balm.	Sweating, steam, hot showers on your face, sun and makeup on brows.
Days 4–10 flaking	Flaking and itching. Color looks patchy under the flakes.	Keep cleansing and use a thin layer of balm. Tap gently around itchy spots.	Picking, scratching or rubbing flakes; it pulls pigment out.
Days 10–21 ghosting	Brows look faded, patchy or almost gone. This is normal.	Be patient; new skin is settling over the pigment.	Judging your results, retinoids or acids near brows.
Weeks 4–6	Color slowly comes back through the skin.	Once healed, use SPF on your brows when outdoors.	Tanning, peels, laser or facials on the area until 4 weeks.
Weeks 6–8 healed	Final result, about 20 to 40 percent lighter than day one.	Come in for your touch-up so we can perfect shape and color.	Laser near your brows without telling the provider about your PMU.

GOOD TO KNOW

- No brow makeup for 10 to 14 days
- Sleep on your back, on a clean pillowcase
- Tell laser providers you have brow PMU
- No hard workouts or heavy sweating for 10 days
- Very oily skin? I may suggest dry healing instead
- Keep retinol and acids off your brows long term

Hands off
Let flakes fall away on their own.

Less is more
A rice-grain of balm, never a thick coat.

Stay dry
No swimming, sauna or steam for 14 days.

Sun safe
No tanning for 4 weeks, then SPF daily.

CALL ME RIGHT AWAY IF YOU NOTICE

- Redness or warmth that spreads beyond the brows
- Fever or feeling unwell
- Hives, a spreading rash or intense itching
- Pus, yellow crusts or red streaks
- Pain or swelling getting worse after 72 hours
- Firm bumps weeks or months later

Trouble breathing, or swelling of the face or throat: call 911.

INFORMED CONSENT

Powder & Ombré Brow Consent

YOUR LOGO

CLIENT NAME | STYLE: POWDER · OMBRÉ · COMBO | DATE

WHAT IT IS
A single-use machine needle builds soft, shaded color. Combo adds hair strokes up front.

WHAT TO EXPECT
About 2 to 3 hours. A touch-up at 6 to 10 weeks is part of the process. Suits oily and mature skin.

HOW LONG IT LASTS
Usually 2 to 5 years, depending on skin, sun and aftercare. Combo strokes fade sooner than shading.

POSSIBLE RISKS AND SIDE EFFECTS

- A heavy or block-like look if over-saturated
- Uneven fading or asymmetry, refined at touch-up
- Allergy to pigment or numbing, even months later
- Granulomas (firm bumps), which are rare
- Color change as it fades (cooler or warmer)
- Scarring or texture change if skin is damaged
- Infection, especially without good aftercare
- Koebner reaction (psoriasis or vitiligo flaring)

MRI: iron-oxide pigments can rarely cause warmth or swelling. Tell the radiologist; never skip an MRI because of PMU.

Quick health check

1	**Consult & screen**	10–15 min	Confirm health changes. Assess skin type, hair, old PMU. Defer if needed.
2	**Consent & photos**	5 min	Consent signed. Photos front, both sides and 45°, even light.
3	**Mapping & approval**	20–30 min	Map shape and gradient. Client approves in a mirror and initials.
4	**Numbing**	20–30 min	Topical only as state rules and label allow. Record product, times.
5	**Pigment selection**	5 min	Match undertone and Fitzpatrick; brows heal cooler. Record lot.
6	**Prep**	2 min	Remove numbing, antiseptic prep. Check machine and cartridge.
7	**Shading**	60–90 min	Light, even, superficial passes to avoid blowout. Ombré: soft front, defined tail. Combo: strokes up front first.
8	**Wipe & assess**	Ongoing	Sterile gauze. Check symmetry, gradient, saturation from a distance.
9	**Secondary numbing**	If used	Only on opened skin, only if state rules and the label permit.
10	**After photos**	5 min	Client mirror check. Same angles and light as the before photos.
11	**Aftercare & touch-up**	5 min	Blot, thin balm, review sheet and card. Book touch-up at 6 to 10 weeks.

ENDPOINT AND SAFETY

- Soft, even saturation; stop before it looks solid
- Fitzpatrick IV–VI: lighter hand, scar risk
- Excess bleeding or swelling: pause, reassess
- Combo strokes heal softer, fade sooner

IF SOMETHING GOES WRONG

- Hives, wheezing or swelling: stop, remove product. Call 911 if breathing is affected.
- Fainting or dizziness: stop, lay the client flat, raise legs, monitor. 911 if slow to recover.
- Needlestick or blood exposure: follow your written exposure control plan.
- Heavy bleeding: stop, firm pressure with sterile gauze. End the session if it doesn't settle.
- Pigment or numbing in the eye: flush with saline; same-day eye care if irritation continues.
- Later spreading redness, pus or fever: refer the client to a physician.

Always write an incident report and check in with the client within 24 to 48 hours.

AFTERCARE

Caring for Your Powder Brows

Powder, ombré and combo brows heal in stages over 6 to 10 weeks.
Here's what to expect, and how to protect your color.

YOUR LOGO

WHEN	WHAT'S NORMAL	DO	AVOID
Day 0 today	Dark, bold brows, slight swelling and clear fluid (lymph).	Blot gently with sterile gauze every 15 to 20 minutes for 2 to 3 hours. Sleep on your back.	Touching, makeup, workouts and getting your brows wet.
Days 1–3	Brows look darker and more solid than they will heal. Mild tenderness.	Cleanse 1 to 2 times a day with water or a fragrance-free cleanser. Pat dry, then a rice-grain of balm.	Sweating, steam, hot showers on your face, sun and makeup on brows.
Days 4–10 flaking	Thicker flakes and itching are common.	Keep cleansing and use a thin layer of balm. Tap gently around itchy spots.	Picking, scratching or rubbing flakes; it can leave bare patches.
Days 10–21 lighter stage	Brows look much lighter or patchy. This is normal.	Be patient; new skin is settling over the pigment.	Judging your results, retinoids or acids near brows.
Weeks 4–6	Color returns and evens out; combo strokes look softer.	Once healed, use SPF on your brows when outdoors.	Tanning, peels, laser or facials on the area until 4 weeks.
Weeks 6–10 healed	Final soft, powdered result, lighter than day one.	Come in for your touch-up to perfect density and color.	Laser near your brows without telling the provider about your PMU.

GOOD TO KNOW

- No brow makeup for 10 to 14 days
- Sleep on your back, on a clean pillowcase
- Tell laser providers you have brow PMU
- No hard workouts or heavy sweating for 10 days
- Very oily skin? I may suggest dry healing instead
- Keep retinol and acids off your brows long term

Hands off
Let flakes fall away on their own.

Less is more
A rice-grain of balm, never a thick coat.

Stay dry
No swimming, sauna or steam for 14 days.

Sun safe
No tanning for 4 weeks, then SPF daily.

CALL ME RIGHT AWAY IF YOU NOTICE

- Redness or warmth that spreads beyond the brows
- Fever or feeling unwell
- Hives, a spreading rash or intense itching
- Pus, yellow crusts or red streaks
- Pain or swelling getting worse after 72 hours
- Firm bumps weeks or months later

Trouble breathing, or swelling of the face or throat: call 911.

CLIENT NAME _____ ARTIST _____ DATE _____

WHAT IT IS

A machine with a single-use needle shades soft color into the lips and defines the lip line.

WHAT TO EXPECT

About 2 to 3 hours. A touch-up at 6 to 8 weeks is part of the process; many lips need 2 or more sessions.

HOW LONG IT LASTS

Usually 2 to 3 years. Lips heal softer, lighter and a little cooler than they look on day one.

POSSIBLE RISKS AND SIDE EFFECTS

- A cold sore outbreak, even if they're rare for you
- Uneven or patchy color, refined at touch-up
- Allergy to pigment or numbing, even months later
- Scarring or texture change, which is rare
- Swelling that lasts longer than a few days
- A cooler or darker shift, more so on darker lips
- Infection, especially without good aftercare
- Granulomas (firm bumps), which are rare

Had cold sores before? Ask your physician about preventive medication before your visit. MRI: tell the radiologist.

Quick health check

- Pregnant or breastfeeding
- History of keloids
- Lip filler in the past 4 weeks
- Rash, infection or cracked lips
- Previous lip tattoo or PMU
- Accutane in the past 6 months
- Chemo or radiation in 6 months
- Botox near lips in 2 weeks
- Diabetes, autoimmune or heart issue
- Fainting, epilepsy or pacemaker
- Cold sore now or in past 2 weeks
- Bleeding disorder or blood thinners
- Peel, laser or microneedling in 4 wks
- Allergy: pigment, numbing, latex
- History of cold sores

☐ **None of these apply to me** or list any that do: _____

Design and color approval. I've seen my lip shape outlined in a mirror and a pigment swatch, and approve the lip line and color. ☐

Please initial each statement

	Initials
I've shared my full health, medication and skincare history honestly, and will report any changes.	
I understand the risks above. Results vary with skin type, age, sun and healing, and aren't guaranteed.	
Lips look bright, then peel and turn chalky (frosty stage) before color returns. Final color at 4 to 6 weeks.	
A touch-up at 6 to 8 weeks is usually needed; darker lips may need a corrector session first. [Terms.]	
I'll follow my aftercare. Picking, sun, dryness or skipping it can cause fading, scarring or infection.	
This is semi-permanent. It fades but may not disappear completely, and removal isn't guaranteed.	
Before and after photos for my private record are required. Social media use only with my separate OK.	
Deposits and fees follow [Your Business Name] policy. Services can't be refunded once performed.	

By signing, I confirm I am 18 or older, have shown government photo ID, have read this form, had my questions answered, and consent to lip blush and my touch-up.

CLIENT SIGNATURE _____ DATE _____ ARTIST SIGNATURE · LICENSE # _____ DATE _____

PRACTITIONER PROTOCOL

Lip Blush

Follow your state and local body-art rules and your pigment and numbing labels. Times are typical.

SCREEN

Photo ID (18+). No cold sore in 2 weeks. Lip filler at least 4 weeks ago.

COLD SORE HISTORY

Client asked their physician about preventive medication. Chart it.

PATCH TEST

Offered 24 to 48 hours ahead, 7-day final check. Waiver if declined.

SET UP FIRST ☐ BBP precautions, PPE on ☐ Barrier film on bed, lamp, machine ☐ Sharps container in reach ☐ Sealed single-use needle cartridge ☐ Pigment decanted to a single-use cup ☐ Brand, color, lot, expiry recorded ☐ Sterile gauze & cool compress ☐ Mirror, lip liner, timer

#	STEP	TIME	HOW
1	**Consult & screen**	10–15 min	Confirm health changes. Check for cracks or a cold sore. Defer if present.
2	**Consent & photos**	5 min	Consent signed. Photos front, sides and close-up, lips relaxed.
3	**Mapping & approval**	15–20 min	Outline lip line for symmetry. Client approves in a mirror and initials.
4	**Numbing**	20–30 min	Topical only as state rules and label allow. Record product, times.
5	**Pigment selection**	5 min	Lips heal cooler, lighter. Dark or cool lips: warm corrector first.
6	**Prep**	2 min	Remove numbing, antiseptic prep. Protect the mouth corners.
7	**Lip line & fill**	60–90 min	Define the border, then shade in soft, even, superficial layers. Avoid blowout past the border.
8	**Wipe & assess**	Ongoing	Sterile gauze. Check symmetry and even color, lips relaxed.
9	**Secondary numbing**	If used	Only on opened skin, only if state rules and the label permit.
10	**After photos**	5 min	Client mirror check. Same angles and light as the before photos.
11	**Aftercare & touch-up**	5 min	Thin balm, cool compress, review sheet and card. Touch-up 6 to 8 weeks.

ENDPOINT AND SAFETY

- Soft, even color; pinpoint bleeding at most
- Dark lips: corrector first, 2 to 3 sessions
- Lips swell fast: work efficiently
- Blister or tingling during visit: stop, refer

IF SOMETHING GOES WRONG

- Hives, wheezing or swelling: stop, remove product. Call 911 if breathing is affected.
- Fainting or dizziness: stop, lay the client flat, raise legs, monitor. 911 if slow to recover.
- Needlestick or blood exposure: follow your written exposure control plan.
- Heavy bleeding: stop, firm pressure with sterile gauze. End the session if it doesn't settle.
- Severe or one-sided swelling: cool compress; if it worsens, refer to a physician.
- Blisters later (possible cold sore): refer the client to their physician.

Always write an incident report and check in with the client within 24 to 48 hours.

AFTERCARE

Caring for Your Lip Blush

Lips heal fast but change a lot in the first month. Keep them moist, be patient, and here's what to expect along the way.

YOUR LOGO

WHEN	WHAT'S NORMAL	DO	AVOID
Day 0 today	Swelling, tenderness and very bright or dark color.	Thin layer of balm at all times. Clean, wrapped cool compress 10 minutes at a time. Drink through a straw.	Hot drinks, kissing, and touching your lips.
Days 1–3	Swelling eases. Color still looks bold and uneven.	Rinse gently with water after eating, pat dry, reapply balm. Straw for 3 to 5 days.	Spicy, salty, acidic or very hot foods. Kissing for 7 days.
Days 3–7 peeling	Peeling, dryness and itching.	Keep a thin layer of balm on all day and at bedtime.	Picking, licking or biting your lips.
Days 7–14 frosty stage	Lips look chalky or milky and color seems to vanish. This is normal.	Keep lips moisturized and stay hydrated.	Lipstick, gloss or other lip products for 14 days.
Days 14–28	Color slowly returns from within.	Once healed, use an SPF lip balm outdoors.	Sun and tanning for 4 weeks; retinoids or acids near lips.
Weeks 4–6 healed	Final color, softer and a little cooler than day one.	Come in for your touch-up at 6 to 8 weeks.	Lip filler until at least 4 weeks, or until after your touch-up.

GOOD TO KNOW

- Prescribed cold sore medication? Take as directed
- Darker lips may need a corrector session first
- Apply balm with a clean swab or clean fingers
- Tell laser or filler providers about your PMU

Always moist
Never let your lips dry out while healing.

Use a straw
For 3 to 5 days, to keep lips clean.

Hands off
Let peeling skin come away on its own.

Sun safe
No tanning for 4 weeks, then SPF lip balm.

CALL ME RIGHT AWAY IF YOU NOTICE

- Blisters, tingling or a cold sore starting
- Fever or feeling unwell
- Hives, a spreading rash or intense itching
- Pus, yellow crusts or red streaks
- Pain or swelling getting worse after 72 hours
- Firm bumps weeks or months later

Trouble breathing, or swelling of the face or throat: call 911.

Permanent Eyeliner Consent

YOUR LOGO

CLIENT NAME | BIRTH DATE | DATE | SESSION #

WHAT IT IS
Pigment placed along the lash line with a sterile, single-use needle for fuller-looking lashes or a defined liner. It is a cosmetic tattoo.

WHAT TO EXPECT
About [2–3] hours. Watery, puffy eyes; swelling peaks at 24–48 hours. A touch-up at 6–8 weeks completes the process.

HOW LONG IT LASTS
Usually 3–5 years, softening over time. Sun, skincare and skin type affect fading. Removal is slow and may be incomplete.

POSSIBLE RISKS AND SIDE EFFECTS

- Swelling, bruising and watery eyes for several days
- Eye irritation, conjunctivitis or eye infection
- Rarely, a scratch on the eye (corneal abrasion)
- Uneven lines or patchy healing that needs a touch-up
- Pigment spreading past the lash line (migration)
- Pigment or numbing product getting into the eye
- Some lash loss, usually temporary
- Allergy; rarely, granuloma or scarring

Before your appointment

	Yes	No
Pregnant or breastfeeding	☐	☐
Glaucoma, or eye surgery in the past 6 months	☐	☐
Lash growth serum in the past 3 months	☐	☐
Lash extensions or lift now	☐	☐
Accutane (isotretinoin) in past 6 months	☐	☐

	Yes	No
Blood thinners or a bleeding disorder	☐	☐
Stye, eye infection or rash near the eyes	☐	☐
Dry eye, or you wear contact lenses	☐	☐
Keloids, diabetes or autoimmune condition	☐	☐
Allergy to numbing, pigment, nickel or latex	☐	☐

YOUR LINER DESIGN

We'll agree on style and thickness in the mirror first. Liner can be built up at the touch-up but is hard to take away.

☐ Lash enhancement ☐ Thin classic ☐ Defined ☐ Small wing ☐ Upper only ☐ Upper & lower

I approve this design. Notes _____ Client initials _____

Please initial each statement

	Initials
My health, eye and medication history is complete and true. I'll share any changes.	
I understand the risks above, including migration, eye irritation and, rarely, eye injury.	
I'll keep my eyes closed and still when asked, and speak up right away about stinging or pain.	
Afterward: no contacts for 7 days, eye makeup for 14 days, or lash extensions or lifts for 4 weeks.	
Healed liner is softer than day one; a 6–8 week touch-up is needed. Results aren't guaranteed.	
This is a tattoo. It fades over years; removal takes several sessions and may be incomplete.	
I'll follow aftercare and get urgent eye care for eye pain, vision change or ongoing discharge.	
I'm sober today, my questions were answered, and services can't be refunded once performed.

By signing, I confirm I'm 18 or older and consent to permanent eyeliner and its touch-up. ☐ Photo ID checked

CLIENT SIGNATURE | DATE | ARTIST SIGNATURE · LICENSE # | DATE

PRACTITIONER PROTOCOL

Eyeliner & Lash Enhancement

Your state/local body art rules and your pigment and numbing manufacturers' directions come first. Times are typical.

SCREEN

Glaucoma, eye surgery (6 mo), lash serum (3 mo), blood thinners, allergies. Eye doctor or physician clearance on file.

PATCH TEST

Offer for pigment and numbing; check at 24–48 hours and 7 days. Negative doesn't rule out allergy. Waiver if declined.

CLIENT PRE-CARE

Extensions off 1 week before. No eye makeup. Contacts out, glasses in. No alcohol 48 hours or caffeine day of.

SET UP FIRST ☐ BBP PPE ☐ Barriers on all surfaces ☐ Sealed single-use cartridge ☐ Pigment decanted, lot logged ☐ Sterile saline eyewash ☐ Sterile swabs ☐ Sharps ☐ Cold packs

#	STEP	TIME	HOW
1	**Consult & screen**	10–15 min	Review intake, meds and eye history. Inspect lids under magnification. Defer for a stye, conjunctivitis, irritation or missing clearance.
2	**Consent & photos**	5 min	Consent signed, photo ID checked (18+). Before photos eyes open, closed and looking up; same light every visit.
3	**Design approval**	10–15 min	Agree style and thickness sitting up, eyes open, in the mirror. Client initials the design. Start conservative.
4	**Numb (eye-safe)**	15–20 min	Per state rules and label. Eye closed; thin layer on lid skin only, never waterline or eye. Remove fully with a damp sterile swab.
5	**Shield the eye**	Throughout	Eye stays closed. Stretch away from the eye with dry gloves. Damp swabs, never dripping. Needle angled away from the globe.
6	**Procedure**	45–90 min	Shallow, controlled passes in the lash line; upper, then lower if booked. Secondary numbing per label, kept out of the eye.
7	**Assess**	5 min	Sit up, eyes open. Check symmetry and saturation. Don't overwork; extra passes drive swelling and migration.
8	**Rinse & photos**	5 min	Wipe lash line with sterile saline. Cold compress over closed lids. Repeat before-photo angles.
9	**Aftercare & rebook**	5 min	Review aftercare: cold compress 10 min at a time, no contacts 7 days. Book touch-up 6–8 weeks out.

SAFETY ENDPOINT · Stop at even lash-line saturation, or sooner for heavy swelling, bleeding that clouds the work, uncontrolled tearing or client distress. Fill gaps at the touch-up.

IF SOMETHING GOES WRONG

- Eye exposure: irrigate with sterile saline 15 min; urgent eye care.
- Allergy: stop, remove product. 911 if breathing is affected.
- Eye pain or vision change: stop, no rubbing; urgent eye care.
- Fainting: recline, legs up. Bleeding: firm pressure, sterile gauze.
- Incident report, FDA MedWatch for pigment reactions, client check-in within 24–48 hours.

RECORD FOR THIS SESSION

Pigment brand · color	Lot # · expiry	Needle config (e.g. 1RL)	Machine · speed
Numbing product(s) · times	Session # (1st / touch-up)	Next session date	Reaction · initials

AFTERCARE

Caring for Your New Eyeliner

Expect puffy, watery eyes for a day or two, and liner that looks darker and bolder than it will heal. Here's how to protect your results.

YOUR LOGO

WHEN	WHAT'S NORMAL	DO	AVOID
Day 0 today	Watery eyes, puffiness, tenderness. Liner looks dark and thick.	Blot gently with clean gauze for the first 2–3 hours. Cold compress over closed eyes, 10 minutes at a time.	Rubbing, eye makeup, contact lenses and sleeping face down.
Days 1–2 swelling peaks	Swelling peaks at 24–48 hours, often worse in the morning. Light crusting at the lash line.	Cold compress 10 minutes on, 10 off. Rinse lash line gently 1–2 times a day with water, pat dry. Balm only if I gave you one. Sleep with your head raised.	Hot water on your face, sweating, workouts and rubbing your eyes.
Days 3–7 light flaking	Light flaking at the lash line. Liner may look patchy or uneven.	Keep cleansing gently and let flakes fall off on their own. Wear glasses, not contacts.	Picking, mascara, eye makeup remover, pools, hot tubs, saunas and steam.
Days 8–14	Color can look lighter or faded while the skin finishes healing.	Contacts are OK from day 7 with freshly washed hands. Keep it simple.	Eye makeup until day 14, and swimming or steam until day 14.
Weeks 2–6 healed	Healed in 2–4 weeks. Final color settles; any gaps get filled at your touch-up.	Sunglasses outdoors. Come back for your touch-up at 6–8 weeks.	Lash extensions or lifts for 4 weeks, and retinoids, acids, facials or laser near the eyes for 4 weeks.

Cool it
Cold compress 10 minutes at a time for 48 hours.

Hands off
No rubbing, scratching or picking.

Glasses week
No contact lenses for 7 days.

Bare eyes
No eye makeup for 14 days, no lash services for 4 weeks.

CALL ME RIGHT AWAY IF YOU NOTICE

- Redness or warmth that spreads, or pus or yellow crust
- Fever, or red streaks spreading from the area
- Swelling or pain that gets worse after 72 hours
- Firm bumps along the lash line weeks or months later

Get urgent eye care right away for eye pain, vision changes, ongoing discharge or light sensitivity.
Trouble breathing, or swelling of the face or throat: call 911.

CONTACTS OK FROM _____

EYE MAKEUP OK FROM _____

YOUR TOUCH-UP _____

INFORMED CONSENT

Saline Tattoo Removal Consent

YOUR LOGO

CLIENT NAME | BIRTH DATE | DATE | SESSION #

WHAT IT IS
Saline solution is worked into old pigment with a sterile, single-use needle, and pigment lifts out with the scab. Best for lightening PMU.

WHAT TO EXPECT
Usually 2–4+ sessions, at least 8 weeks apart, on fully healed tattoos only. The area scabs and stays dry for 7–10 days.

REALISTIC RESULTS
Each session lightens; it rarely erases in one visit. Some pigment may not lift fully. Complete removal isn't guaranteed.

POSSIBLE RISKS AND SIDE EFFECTS

- Incomplete removal or uneven lightening
- Scarring or texture change, more likely with picking
- Healing that takes longer than expected
- Darker marks, more likely in deeper skin tones
- Lighter patches of skin (hypopigmentation)
- Infection, especially if the scab gets wet or picked
- Color shift as pigment lifts (warm, red or orange tones)
- Allergy, or temporary hair loss in brow areas

Before your appointment

	Yes	No
Pregnant or breastfeeding	☐	☐
Tattoo less than 8 weeks old or not healed	☐	☐
Keloids or raised scarring	☐	☐
Laser or other removal in the past 8 weeks	☐	☐
Accutane (isotretinoin) in past 6 months	☐	☐

	Yes	No
Blood thinners or a bleeding disorder	☐	☐
Rash, cold sore or open wound in the area	☐	☐
Diabetes, autoimmune condition or slow healing	☐	☐
Chemotherapy or radiation in past 6 months	☐	☐
Allergy to numbing, latex or nickel	☐	☐

AREA AND GOAL

We'll outline the exact area to lighten and agree on a realistic goal for today and for your whole plan.

☐ Lighten for a correction ☐ Lighten for a cover ☐ Lighten as much as possible ☐ One section only

I approve this area. Notes _____ Client initials _____

Please initial each statement

	Initials
My health and medication history is complete and true. I'll share any changes.	
I understand the risks above, including scarring, light patches and color shifts.	
Several sessions at least 8 weeks apart are usually needed. Complete removal isn't promised.	
I'll keep the area dry with no ointment for 7–10 days and let the scab fall off on its own.	
New permanent makeup over the area waits until it's fully healed and my artist approves.	
Before photos are taken each session so we can track progress honestly.	
I'll follow my aftercare and contact my artist about any sign of infection.	
I'm sober today, my questions were answered, and services can't be refunded once performed.	

Signatures

By signing, I confirm I'm 18 or older and consent to saline tattoo removal on the area marked. ☐ Photo ID checked

CLIENT SIGNATURE | DATE | ARTIST SIGNATURE · LICENSE # | DATE

PRACTITIONER PROTOCOL

Saline Tattoo Removal

Your state/local rules and your saline solution manufacturer's directions come first. Times are typical.

SCREEN

Tattoo fully healed (8+ weeks); last removal 8+ weeks ago. Keloids, blood thinners, allergies. Patch test offered.

ASSESS PIGMENT

Color, density, depth and any old scarring under magnification. Warn that white or titanium-heavy pigment can shift or resist.

CLIENT PRE-CARE

No retinoids or acids on the area 14 days, no sun 2 weeks. No alcohol 48 hours. Plan around 7–10 dry days.

SET UP FIRST ☐ BBP PPE ☐ Barriers on all surfaces ☐ Sealed single-use cartridge ☐ Solution decanted, lot logged ☐ Sterile saline eyewash ☐ Sterile swabs & gauze ☐ Sharps

#	STEP	TIME	HOW
1	**Consult & screen**	10–15 min	Review intake and history. Confirm healing and spacing. Defer for any absolute contraindication or missing clearance.
2	**Consent & photos**	5 min	Consent signed, photo ID checked (18+). Close-up before photos with a scale, same light every session.
3	**Area approval**	5–10 min	Outline the exact area to lighten. Client approves in the mirror and initials. Agree today's realistic goal.
4	**Numb**	15–20 min	Per state rules and label. Remove fully before working so solution meets clean skin. Eye-safe precautions near liner.
5	**Open the pigment**	10–30 min	Work only within the tattoo border, at the depth of the old pigment. Even, overlapping passes; don't chase one spot.
6	**Apply solution**	Per label	Work the saline solution into the opened area as directed. Allow brief dwell time for pigment to draw up.
7	**Assess**	5 min	Blot with dry sterile gauze; pigment should transfer. Stop at even opening. Split large or dense areas across sessions.
8	**Dress & photos**	5 min	Leave clean and dry. No ointment. Repeat the before-photo angles.
9	**Aftercare & rebook**	5 min	Review dry healing: no water or ointment 7–10 days, no picking. Book next session 8+ weeks out.

SAFETY ENDPOINT · Stop when the area is evenly opened with pigment lifting into the gauze. Repeated passes, heavy bleeding or a raw, glossy look mean overworking, which raises scarring and light-patch risk.

IF SOMETHING GOES WRONG

· Eye exposure: irrigate with sterile saline 15 min; urgent eye care.

· Fainting: recline, legs up, monitor. 911 if not quickly recovered.

· Allergy: stop, remove product. 911 if breathing is affected.

· Bleeding: firm pressure, sterile gauze. Signs of infection later: refer.

· Incident report, client check-in within 24–48 hours, and a photo at each visit to track healing.

RECORD FOR THIS SESSION

Solution brand	Lot # · expiry	Needle config · tool	Area treated · size
Numbing product(s) · times	Session # of planned	Next session (8+ wks)	Lift · reaction · initials

AFTERCARE

After Your Saline Removal

Saline lifts old pigment out with the scab, so the scab is doing the work. Keeping the area clean and completely dry is what makes it succeed.

YOUR LOGO

WHEN	WHAT'S NORMAL	DO	AVOID
Day 0 today	Redness, slight swelling and light weeping. The area may look raw or darker.	Blot gently with clean, dry gauze until weeping stops. Leave it uncovered unless I say otherwise.	Water, ointment, balm, makeup and touching the area.
Days 1–3 scab forms	A dry crust forms with pigment inside it. Mild tenderness.	Keep it completely dry. Wash around it carefully and shower with your face away from the water.	Sweating, workouts, swimming, steam, rain and any products on the area.
Days 4–10 keep it dry	The scab tightens, itches, then falls off on its own.	Stay dry until the scab has fallen off naturally, usually in 7–10 days.	Picking, scratching, or soaking the scab off. It pulls out pigment unevenly and can scar.
Weeks 2–4	Pink, shiny new skin. The old pigment looks lighter.	Once the scab is off, gentle cleanser and a fragrance-free moisturizer if I say so.	Sun, tanning, retinoids and acids on the area for 4 weeks.
Week 8+ next session	Lightening keeps showing as the skin matures.	SPF daily once healed. Book your next session at least 8 weeks out.	New permanent makeup or other removal on the area until I've checked it.

Keep it dry
No water on the area for 7–10 days.

Let it fall
The scab lifts the pigment. Don't pick.

Skip the balm
No ointment or creams while it scabs.

Be patient
At least 8 weeks between sessions.

CALL ME RIGHT AWAY IF YOU NOTICE

- Redness or warmth that spreads, or pus
- Fever, or red streaks spreading from the area
- A scab that turns soft, wet or yellow
- Pain or swelling that gets worse after 72 hours

Treated near the eyes? Get urgent eye care for eye pain, vision changes or discharge.

Trouble breathing, or swelling of the face or throat: call 911.

KEEP DRY UNTIL _____

PRODUCTS OK FROM _____

YOUR NEXT SESSION _____

INFORMED CONSENT

Scalp Micropigmentation Consent

YOUR LOGO

CLIENT NAME | BIRTH DATE | DATE | SESSION #

WHAT IT IS
A cosmetic tattoo of tiny dots that mimic short hair or soften scars, using a sterile, single-use needle. It doesn't grow hair.

WHAT TO EXPECT
2–3 sessions about 10–14 days apart, [2–5] hours each. Dots look darker at first and soften as they heal.

HOW LONG IT LASTS
Usually 3–6 years before a refresh. Sun, scalp oil, exfoliating and harsh products speed fading. Removal is slow and may be incomplete.

POSSIBLE RISKS AND SIDE EFFECTS

- Dots spreading or blurring (blowout)
- Uneven density or shade between sessions
- A hairline that looks less natural as hair loss changes
- Allergy to pigment or numbing
- A blue or gray cast if pigment sits too deep
- Fading or color change, especially with sun
- Redness, tenderness or flaking for several days
- Infection; rarely, granuloma or scarring

Before your appointment

	Yes	No
Pregnant or breastfeeding	☐	☐
Psoriasis, eczema or acne flare on the scalp	☐	☐
Keloids or raised scarring	☐	☐
Hair transplant or scalp surgery in the past year	☐	☐
Accutane (isotretinoin) in past 6 months	☐	☐

	Yes	No
Blood thinners or a bleeding disorder	☐	☐
Sunburn, cold sore or open wound on the scalp	☐	☐
Diabetes, autoimmune condition or slow healing	☐	☐
Chemotherapy or radiation in past 6 months	☐	☐
Allergy to numbing, pigment, nickel or latex	☐	☐

YOUR HAIRLINE AND DENSITY

We'll draw your hairline on your scalp and agree on shape, density and shade before any pigment goes in.

☐ Soft, natural hairline ☐ Defined hairline ☐ Density only ☐ Crown ☐ Scar camouflage

I approve this hairline and shade. Notes _____ Client initials _____

Please initial each statement

	Initials
My health and medication history is complete and true. I'll share any changes.	
I understand the risks above, including blowout, a blue cast and uneven density.	
I've seen my hairline in the mirror and photos. A design that suits me now should suit me as I age.	
2–3 sessions about 10–14 days apart are needed. Results vary and aren't guaranteed.	
SMP doesn't regrow hair, and my natural hair loss may continue and change how it looks.	
This is a tattoo. It fades over years; removal takes several sessions and may be incomplete.	
I'll follow aftercare: no washing 3–5 days, no sweat, swimming or sun for 2–4 weeks.	
I'm sober today, my questions were answered, and services can't be refunded once performed.

CLIENT SIGNATURE | DATE | ARTIST SIGNATURE · LICENSE # | DATE

PRACTITIONER PROTOCOL

Scalp Micropigmentation

Your state/local body art rules and your pigment manufacturer's directions come first. Times are typical.

SCREEN
Scalp conditions, hair loss pattern and cause, transplant timing (surgeon clearance), blood thinners, allergies.

PATCH TEST
Offer for pigment and numbing; check at 24–48 hours and 7 days. Negative doesn't rule out allergy. Waiver if declined.

CLIENT PRE-CARE
Clip or shave to the agreed length as instructed. Wash hair the morning of. No alcohol 48 hours. Eat beforehand.

SET UP FIRST ☐ BBP PPE ☐ Barriers on machine, cord, headrest ☐ Sealed cartridges, spares ready ☐ Pigment decanted, lot logged ☐ Sterile diluent only ☐ Sterile gauze ☐ Sharps

#	STEP	TIME	HOW
1	**Consult & screen**	15 min	Review intake, meds and scalp. Look for flares, lesions or sunburn. Defer for any absolute contraindication.
2	**Consent & photos**	5 min	Consent signed, photo ID checked (18+). Before photos front, both sides, top, crown and back, same light.
3	**Design approval**	15–30 min	Draw the hairline with a skin marker; check symmetry from every angle. Soft, irregular, age-appropriate front. Client approves and initials.
4	**Prep & numb**	10–20 min	Cleanse with antiseptic. Topical numbing only if allowed in your state, per label. Eye-safe care near the brow.
5	**Shade test**	5 min	A few test dots beside existing stubble. Dilute only with sterile, manufacturer-approved diluent; never tap water.
6	**Procedure**	2–5 hr	Shallow, randomized dots of varied size and spacing. Work from a soft hairline back. Avoid rows. Change cartridges as they dull.
7	**Assess**	5 min	View from a distance and all angles. Session 1 builds a light foundation; don't chase full density.
8	**Clean & photos**	5 min	Wipe with sterile damp gauze. Repeat the before-photo angles.
9	**Aftercare & rebook**	5 min	Review aftercare: no washing 3–5 days, no sweat or sun. Book the next session 10–14 days out.

SAFETY ENDPOINT · Stop when dots are crisp and evenly spread. Dots joining, heavy bleeding, swelling or a gray-blue look mean too deep or too much. Session 2 adds density; session 3 refines.

IF SOMETHING GOES WRONG

· Eye exposure: irrigate with sterile saline 15 min; urgent eye care.
· Allergy: stop, remove product. 911 if breathing is affected.
· Fainting: recline, legs up. Long sessions: offer breaks, water, a snack.
· Bleeding: firm pressure, sterile gauze. Signs of infection later: refer.
· Incident report, FDA MedWatch for pigment reactions, client check-in within 24–48 hours.

AFTERCARE

Caring for Your Scalp After SMP

Your dots will look darker and sharper at first, then soften as they heal. Gentle, dry care in the first few days protects every one of them.

YOUR LOGO

WHEN	WHAT'S NORMAL	DO	AVOID
Day 0 today	Redness, tenderness and slight swelling. Dots look dark and bold.	Blot gently with clean gauze for the first 2–3 hours. Sleep on your back on a clean pillowcase.	Washing, touching, tight or dirty hats, and sweating.
Days 1–3 stay dry	Redness fades in 1–3 days. Tiny crusts may form.	Keep your scalp dry. A loose, clean cotton hat is OK if you need one.	Washing, shampoo, rain or shower water on your head, and scratching.
Days 4–7 light flaking	Light flaking and itching as the dots settle.	After day [3–5], rinse with lukewarm water and a gentle, fragrance-free shampoo. Pat dry.	Shaving or clippers until flaking is done (about 7 days), and picking.
Weeks 2–4 next session	Dots look softer and lighter. Your next session at 10–14 days builds density.	Shave carefully once flaking stops. Keep products fragrance-free.	Heavy sweating, gym, sauna, swimming and sun on your scalp for 2–4 weeks.
Long term healed	Healed and settled. Dots fade slowly over years.	SPF 30+ or a hat outdoors. Keep your scalp moisturized. Book a refresh when needed.	Exfoliating scalp products, retinoids, acids and tanning beds.

Stay dry
No washing for 3–5 days.

Keep cool
No sweating or swimming for 2–4 weeks.

Hold the razor
No shaving until flaking stops.

Cover up
Hat or SPF; sun fades dots fastest.

CALL ME RIGHT AWAY IF YOU NOTICE

- Redness or warmth that spreads, or pus
- Fever, or red streaks spreading from the area
- Pain or swelling that gets worse after 72 hours
- Firm bumps on the scalp weeks or months later

Pigment or product in your eye? Rinse with clean water and get urgent eye care.

Trouble breathing, or swelling of the face or throat: call 911.

Areola Restoration Consent

YOUR LOGO

CLIENT NAME | BIRTH DATE | DATE | SIDE(S)

WHAT IT IS
Cosmetic tattooing that adds color, shape and the look of dimension to the areola. Not a medical treatment.

WHAT TO EXPECT
A private, unhurried visit. Usually 2+ sessions 6–8 weeks apart. Color heals softer and fades over time.

WHAT YOU'LL FEEL
Sensation is often reduced after surgery, so you may feel little. Daily checks while healing matter.

OTHER OPTIONS
No treatment, 3D nipple prosthetics, or medical tattooing through your surgeon's office.

POSSIBLE RISKS AND SIDE EFFECTS

· Patchy color, as scar tissue holds pigment unevenly
· Infection, slow healing or long-lasting redness
· Implant, flap or graft concerns (surgeon clears these)
· Fading or color shift, needing a boost
· Allergic reaction to pigment or numbing products
· Color that doesn't exactly match the other side

Before your appointment

	Yes	No
Written surgeon or physician clearance on file	☐	☐
Under [6] months since final surgery or radiation	☐	☐
Implants, expanders, or flap reconstruction	☐	☐
Chemo or immunotherapy in the past 6 months	☐	☐
Pregnant or breastfeeding	☐	☐

	Yes	No
Open, unhealed or tender area, or a rash	☐	☐
History of keloids or raised scars	☐	☐
Blood thinners, bleeding disorder or diabetes	☐	☐
Allergy to pigment, numbing, latex or nickel	☐	☐
Lymphedema or an autoimmune condition	☐	☐

Clearance is required. Some answers mean we wait. Share only what you are comfortable sharing.

Design and photos

☐ I approved the size, placement and color
☐ Optional: marketing photos, torso only, no face
☐ Private chart photos: torso only, no face
☐ No marketing photos, please

Each photo choice is separate. Photos never show your face and are never shared without your yes.

Please initial

	Initials
I've shared my full health and surgical history, including implants, flaps and radiation.	
Results vary, scar tissue may heal unevenly, more than one session is usual, and nothing is guaranteed.	
I'll follow my aftercare and check the area every day while healing, since I may not feel a problem.	
I can stop at any time and withdraw photo permission in writing. My questions were answered.

PRACTITIONER PROTOCOL · PARAMEDICAL

Areola Restoration

Your device and pigment maker's directions come first. Follow your state and local body art rules.

CLEARANCE

Written surgeon or physician clearance on file and dated. Typically 6+ months after final surgery or radiation, fully healed. Note implant, expander or flap type.

PRIVACY

Private room, door closed, sign on the door. Gown open at front. Drape so only the working side is exposed. Ask before you touch.

CONSULT

Intake, consent and photo choices signed. Torso-only photos, never the face. Patch test offered, or waiver signed.

SET UP FIRST ☐ Drape & gown ☐ Barrier film ☐ Single-use cartridges ☐ Pigment cups ☐ Sterile pads ☐ Surgical marker ☐ Ruler or calipers ☐ Sharps container

#	STEP	TIME	HOW
1	**Review & inspect**	5 min	Confirm clearance and health changes. Inspect under good light. Stop for any open, weeping, red or unhealed tissue, or a new lump or change; refer to the surgeon.
2	**Photograph**	2 min	Torso only, same light and angle every visit. Never include the face.
3	**Measure & map**	10–15 min	Measure from the midline and the other side if present. Draw the shape with the client standing and seated. Client checks in a mirror and approves.
4	**Color match**	5–10 min	Match the other areola, or choose a tone that suits the skin. Swatch on skin. Scar and grafted skin often heal lighter; record the mix.
5	**Prep & numb**	Per label	Cleanse and prep the skin. Topical numbing only as your state allows; sensation may already be reduced.
6	**Pigment**	45–90 min	Light hand, shallow passes. Go extra gently over scars and thin skin; reconstructed tissue can be fragile. Build color in layers, not depth.
7	**Check in**	Throughout	Ask for comfort 0–10 and offer breaks. Stop for heavy bleeding, blanching or skin that looks stressed.
8	**Clean & cover**	3 min	Wipe with sterile saline. Thin layer of balm and a sterile non-stick pad. Client puts on a soft, clean bra.
9	**Educate & rebook**	5 min	Walk through aftercare and daily checks. Book the next session 6–8 weeks out.

IF SOMETHING GOES WRONG

- Heavy bleeding: firm pressure with sterile gauze; stop the session.
- Hives or swelling: stop. Call 911 if breathing is affected.
- Implant area pain or swelling: stop and refer to the surgeon same day.
- Signs of infection later: refer to the client's physician promptly.
- Always write an incident report and check in with the client within 24–48 hours.

AFTERCARE

After Your Areola Restoration

Take healing gently. Here is what to expect day by day, and how to protect your new color.

YOUR LOGO

WHEN	WHAT'S NORMAL	DO	AVOID
Day 0 today	Color looks darker and brighter than it will heal. Mild redness or tenderness.	Leave the pad on [2–3] hours. Wash hands, then rinse gently with lukewarm water and pat dry.	Tight, underwire or rough bras. Touching with unwashed hands.
Days 1–3	Slight swelling, a little clear fluid, a shiny look.	Clean once or twice a day, pat dry, rice-grain of balm. Fresh sterile pad and a soft, clean bra.	Heavy workouts, sweating and anything that rubs the area.
Days 4–10 flaking	Light flaking or tiny scabs and some itching. Color may look patchy.	Keep cleaning and a thin layer of balm. Check the area daily in a mirror.	Picking, scratching or peeling. Soaking in baths, pools or hot tubs.
Days 10–14	Flaking ends. Color may look soft or uneven for now.	Keep it clean and dry. Loose, breathable clothing.	Submerging the area for the full 14 days.
Weeks 3–5 settling	Color settles and looks softer, sometimes lighter in scar tissue.	Gentle, fragrance-free moisturizer once healed. Mineral SPF if the area sees sun.	Sun or tanning for 4 weeks. Retinoids or acids on the area.
Weeks 6–8 next session	Healed. Some patchiness is expected and is evened out next visit.	Come to your next session. Bring any questions or changes in your health.	Any other treatment on the area until I've checked it.

Check daily

Look, don't just feel. Sensation may be reduced.

Soft & clean

Soft bra or sterile pad, changed daily.

No soaking

Showers only. No baths or pools for 14 days.

Hands off

Let flakes come away on their own.

CALL ME RIGHT AWAY IF YOU NOTICE

- Redness or warmth that spreads, or red streaks
- Pain or swelling getting worse after 72 hours
- Any change near an implant: swelling, firmness or pain
- Pus, a bad smell, or fluid after day 3
- Fever, or feeling unwell
- Hives, itching rash or blisters

Trouble breathing, or swelling of the face or throat: call 911.

INFORMED CONSENT

Faux Freckles Consent

YOUR LOGO

CLIENT NAME | BIRTH DATE | DATE | AREA

WHAT IT IS
Tiny dots of light brown pigment placed with a machine or by hand to look like natural freckles.

WHAT TO EXPECT
One session, then a touch-up in 6–8 weeks. Freckles soften and fade over about 1–3 years.

WHAT YOU'LL FEEL
Quick pricks or a light scratching feel. Numbing may be used as your state allows.

OTHER OPTIONS
No treatment, freckle pens or makeup, or temporary freckle tattoos.

POSSIBLE RISKS AND SIDE EFFECTS

· Some freckles heal lighter or disappear (normal)
· Placement or spacing that looks uneven to you
· Allergic reaction to pigment or numbing products
· Freckles that spread, blur or heal too dark
· Color shift over time, such as cooler or warmer
· Infection, or darker marks in deeper skin tones

Before your appointment

	Yes	No
Pregnant or breastfeeding	☐	☐
Accutane (isotretinoin) in the past 6 months	☐	☐
Retinol, retinoids or acids on the area in 14 days	☐	☐
Peel, laser, IPL or microneedling in 4 weeks	☐	☐
Sunburn, tanning or self-tanner in 2 weeks	☐	☐

	Yes	No
Acne, rash, cold sore or broken skin in the area	☐	☐
History of keloids or raised scars	☐	☐
Blood thinners, a bleeding disorder or diabetes	☐	☐
Allergy to pigment, numbing, latex or nickel	☐	☐
Chemo or radiation in the past 6 months	☐	☐

A yes doesn't always mean no. We may wait, adjust the plan, or ask for your physician's OK.

ARTIST SIGNATURE · LICENSE # | DATE

PRACTITIONER PROTOCOL

Faux Freckles

Your device and pigment maker's directions come first. Follow your state and local body art rules.

CONSULT

Intake, consent and photo choices signed. Screen for retinoids, recent peels or laser, sunburn and active breakouts.

COLOR

Light to medium brown, matched to natural freckles or slightly lighter. Avoid black and cool, ashy shades; they heal gray.

PATCH TEST

Offer to every client. Check at 24–48 hours and again at 7 days, or have the waiver signed.

SET UP FIRST ☐ Brow pencil or freckle pen ☐ Mirror ☐ Single-use cartridges ☐ Pigment cups ☐ Barrier film ☐ Sterile gauze ☐ Sharps container

PLACEMENT AND COLOR TIPS

· Follow where sun naturally lands: nose bridge, upper cheeks, a few on the forehead or chin

· Fitzpatrick I–II: lighter, softer brown. IV–VI: deeper, warmer brown and a lighter hand

· Mix 3 sizes and leave uneven gaps; avoid lines, grids or perfect symmetry

· Deeper skin tones carry more risk of dark marks; go conservative on the first session

#	STEP	TIME	HOW
1	**Review & inspect**	3–5 min	Confirm health changes. Stop for active acne, a cold sore, rash or sunburn in the area.
2	**Before photos**	2 min	Same light and angle every visit. Front and both sides.
3	**Freckle map**	10–15 min	Dot freckles with a pencil, client seated upright. Vary size and spacing; cluster on the nose and upper cheeks. Client approves in a mirror.
4	**Photograph map**	1 min	Photo of the approved map for the chart, so the touch-up can follow it.
5	**Prep & numb**	Per label	Cleanse without removing the map. Topical numbing only as your state allows.
6	**Implant dots**	20–40 min	Single shallow tap or short circular motion per freckle. Vary dot size slightly. Less is more; you can add at the touch-up.
7	**Check as you go**	Throughout	Step back often to check balance from a distance. Wipe gently; don't smear pigment into open dots.
8	**Clean & protect**	2 min	Wipe with sterile saline. Thin layer of balm, if your aftercare uses one.
9	**After photos & rebook**	5 min	Same light and angles. Go through aftercare. Book the touch-up 6–8 weeks out.

IF SOMETHING GOES WRONG

· Freckle too dark or too big: stop adding; reassess at the touch-up.

· Pigment spreading under the skin: note it; consider lightening later.

· Hives or swelling: stop. Call 911 if breathing is affected.

· Signs of infection later: refer to the client's physician.

· Always write an incident report and check in with the client within 24–48 hours.

AFTERCARE

Caring for Your New Freckles

Freckles heal fast, but they are still a fresh tattoo. Here is what to expect day by day.

YOUR LOGO

WHEN	WHAT'S NORMAL	DO	AVOID
Day 0 today	Freckles look darker and more defined than they will heal. Slight redness.	Blot gently with clean tissue. Wash hands before touching your face.	Makeup on the area, sweating, heat and steam.
Days 1–4	Freckles feel slightly raised. Tiny scabs start to form.	Rinse gently once or twice a day with water or a mild cleanser. Pat dry. Rice-grain of balm.	Rubbing, scrubbing or face cloths on the area. Hard workouts.
Days 5–7 flaking	Tiny scabs flake off and freckles may look lighter or patchy.	Let flakes come away on their own. Keep the area clean.	Picking or scratching. Pools, hot tubs, saunas.
Days 7–14	Healing finishes. Some freckles may look faint for now.	Makeup on the area from day 14, or when I say it's OK.	Retinol, acids, peels and facials on the area.
Weeks 3–8 touch-up	Final color settles. Some may heal lighter or disappear; this is normal.	Daily SPF 30+ once healed. Come to your touch-up.	Sun or tanning for 4 weeks. Laser on the area.
Long term	Freckles soften and fade gradually over 1–3 years.	SPF every day. Tell laser or IPL providers about your freckle tattoo.	Retinoids or acids on the area long term; they fade pigment.

Hands off
Tiny scabs fall off in 5–7 days. Don't pick.

Keep it clean
Clean hands, clean pillowcase.

SPF daily
Once healed. Sun fades freckles fastest.

Be patient
Faint freckles even out at the touch-up.

CALL ME RIGHT AWAY IF YOU NOTICE

- Redness or warmth that spreads
- Pain or swelling getting worse after 72 hours
- Firm bumps that appear weeks later
- Pus, a bad smell, or fluid after day 3
- Fever, or feeling unwell
- Hives, itching rash or blisters

Trouble breathing, or swelling of the face or throat: call 911.

GETTING READY

Before Your PMU Appointment

Good prep means less bleeding, better color retention and a smoother heal. Follow the timeline for your treatment.

YOUR LOGO

NAME

APPOINTMENT DATE & TIME

TREATMENT

3 months before

Eyeliner: stop lash growth serums (bimatoprost and similar).

Brows: same, if you use a serum on your brows.

Took isotretinoin (Accutane) in the past year? Tell me now.

4 weeks before

No chemical peels, laser, IPL or microneedling near the area.

Lips: lip filler done at least 4 weeks before.

2 weeks before

Pause retinoids, retinol, AHA/BHA acids and scrubs on the area.

No sun, tanning beds or self-tanner.

Botox near brows or lips done at least 2 weeks before.

7 days before

Skip aspirin, ibuprofen, fish oil, vitamin E, ginkgo and niacin **unless prescribed**.

Eyeliner: have lash extensions or a lift removed.

48 hours before

No alcohol.

Stay out of strong sun.

Get a good night's sleep.

Day of your visit

No caffeine.

Eat a full meal first.

Clean skin, no makeup on the area.

Eyeliner: contacts out; wear glasses.

Brows

· Come with brows unwaxed and untweezed for [1–2 weeks] so I can see your natural shape.

· Bring the brow pencil or powder you love.

· Microblading or powder? We'll decide together based on your skin.

Lips

· Ever had a cold sore? Ask your doctor about prevention before lip work.

· Bring a lipstick or liner you love.

· Keep lips moisturized the week before.

Eyeliner

· Bring your glasses; contacts stay out.

· Lash extensions or a lift removed 1 week before.

· No eye makeup on the day.

· Tell me about dry eye, glaucoma or any eye surgery.

PLEASE CALL TO RESCHEDULE IF YOU HAVE

· A cold sore, or a cluster of small blisters

· A sunburn or peeling skin in the area

· An active breakout, rash or irritation in the area

· A fever, cold or flu, or feel unwell

· Found out you're pregnant, or think you may be

· Pink eye or a stye (for eyeliner)

We ask for [__] hours' notice. If it's about your safety, just call. We'll find a new time together.

Important

Never stop a prescribed medication, including blood thinners, without your doctor's OK. Tell me about everything you take, and I'll check whether we need a note from your doctor.

NOTES FOR YOU

AFTERCARE · HEALING GUIDE

What to Expect While You Heal

Every heal has an ugly-duckling phase. Find your treatment, see where you are, and know that patchy and pale along the way is part of the process.

YOUR LOGO

Brows

Microblading, powder & combo

DAYS 1–3
Darker, bolder and sharper than they will heal. A little redness or swelling.

DAYS 4–10
Flaking and itching. Let flakes fall off on their own; powder flakes can be thicker.

DAYS 10–21
Ghosting. Brows look patchy, light or almost gone. Totally normal: new skin is covering the pigment.

WEEKS 4–6
Color comes back, softer and more natural.

FINAL RESULT
At 6–8 weeks, about 20–40% lighter than day 1. Touch-up at [6–8] weeks fills any gaps.

Lips

Lip blush

DAYS 1–3
Swollen and tender. Color looks bright or dark.

DAYS 3–7
Peeling. Keep a thin layer of balm on and don't pick.

DAYS 7–14
Frosty stage. Lips look chalky or milky and the color seems to vanish. It hasn't: it's under a healing layer.

DAYS 14–28
Color blooms back, a little more each day.

FINAL RESULT
At 4–6 weeks, softer and often a little cooler. Many lips need a second session to build color.

Eyeliner

Liner & lash enhancement

FIRST 24–48 HOURS
Swelling peaks, and eyes may be puffy or watery. Cold compress, 10 minutes at a time.

DAYS 3–7
Light flaking along the lash line. Don't rub your eyes.

DAYS 7–14
Liner may look lighter or a bit uneven while it settles.

WEEKS 2–4
Healed. The line looks soft and even.

FINAL RESULT
At 2–4 weeks. Touch-up at [6–8] weeks for a crisp, even line.

Hands off
No picking, peeling or scratching.

Keep it clean
Cleanse and balm as your aftercare sheet shows.

No sweat, no soak
No workouts for 10 days, no pools for 14.

Shade it
No sun or tanning for 4 weeks, then SPF.

THIS IS NORMAL

- Tightness, mild itch and flaking
- Color that looks too dark, then too light
- Patchy or uneven color while healing
- One side healing a little differently
- Dry, chalky lips during week 2

CALL ME IF YOU NOTICE

- Redness or warmth that spreads
- Pus, yellow crust or red streaks
- Pain or swelling worse after 72 hours, or fever
- Blisters on your lips (possible cold sore)
- Firm bumps weeks or months later

Call 911 for hives with trouble breathing, or swelling of the face or throat.

Eyeliner: get urgent eye care for eye pain, vision changes, ongoing discharge or light sensitivity.

YOUR TOUCH-UP DATE _____

MAKEUP ON THE AREA OK FROM _____

NOTES _____

PRACTITIONER REFERENCE

Pigment & Color Theory

Healed color = pigment + skin showing through. Plan for both.

Fitzpatrick skin type

I	II	III	IV	V	VI
Very fair	Fair	Medium	Olive	Brown	Deep brown
Light, soft browns; skip heavy ash.	Light to medium, soft neutral.	Medium browns to match undertone.	Deeper, warmer browns.	Deep warm browns.	Deepest warm pigments.

Types IV–VI: higher risk of dark marks and raised scars. Use machine shading, a lighter hand, patch test.

Undertone guide

Cool
Blue or purple veins, silver suits

Neutral or ash pigment.

Warm
Green veins, gold suits

Neutral or warm pigment.

Not sure
Mixed signs, or both metals suit

Neutral-warm. Brows heal cooler.

Opposites neutralize

Healed-color troubleshooting

HEALS AS	LIKELY CAUSE	FIX
Grey or blue	Carbon/black-based pigment, or too deep (Tyndall effect).	Orange or warm corrector, then a warm brown.
Red, pink or salmon	Yellow in the brown faded first, leaving the red.	Green or olive corrector, or a more neutral brown.
Greenish	Yellow-based pigment over old blue-grey work.	Red or warm corrector, then a neutral-warm brown.
Too dark or solid	Over-saturated, or shade too deep for the skin.	Let it fade, or saline lighten. Lighter shade and hand next time.

CORRECTION RULES

- Neutralize with the opposite on the color wheel.
- Space correction sessions at least 8 weeks apart.
- Get prior brand and photos; log every lot.
- Heavy old work: lighten or saline first.

LIP NEUTRALIZATION

- Dark or cool lips: coral or peach corrector first.
- Final lip shade at the next session, 8 weeks on.
- Plan 2–3 sessions; lips heal cooler and lighter.
- Cold sore history: client asks their physician first.

Avoid heavy titanium dioxide lighteners. They heal unpredictably, can leave a chalky or grey cast, and can darken under laser. Follow each pigment maker's instructions.

[5] Defer during a flare; otherwise physician clearance.
[6] 6+ months after treatment ends, plus clearance.
[7] Ophthalmologist clearance; 6+ months after eye surgery.
[8] Infection, wound, rash, acne, psoriasis or eczema flare.
[9] Patch test; record. Use a tolerated anesthetic or none.
[10] Blade: 12 months off. Machine work: 6 months off.
[11] Stop 14 days before; off the healing area 4 weeks.
[12] Client never stops without prescriber OK. More bleeding.
[13] Only if not prescribed. Same for ginkgo and niacin.
[14] Prostaglandin: 3 mo before liner, or brows if used there.
[15] Botox 2+ weeks before. Lip filler 4+ weeks before lips.
[16] Near the area. After PMU: 4 wk post-heal; tell laser techs.

Conservative defaults; check your state rules. Sources disagree on many windows, so this chart uses the more cautious one. Your state or county body art rules, the pigment maker's instructions and the client's physician always come first. Review it yearly.

CONFIDENTIAL · INTERNAL RECORD

Adverse Reaction & Incident Report

Complete the same day. Record facts, not opinions. Keep the pigment bottle.

Aftercare cards · 4 × 6 in · cut along the dotted lines

AFTERCARE

Lip Blush

First 14 days

frosty stage days 7–14

DO

· Keep a thin layer of balm on at all times
· Rinse after eating, pat dry, reapply
· Drink through a straw for 3–5 days
· Cool compress, 10 minutes at a time

AVOID

· Spicy, salty, acidic or very hot food
· Kissing for 7 days
· Lipstick or lip products for 14 days
· Picking, licking or biting peeling skin

Chalky, faded lips at days 7–14 are normal; color returns. **Touch-up** at 6–8 weeks: [date]

CALL ME IF

Blisters or tingling (possible cold sore) · pus or spreading redness · fever · swelling worse after 72 hours. Trouble breathing: call 911.

Questions? Text [Phone] [Your Business Name]

AFTERCARE

Permanent Eyeliner

First 2 weeks

swelling peaks at 24–48 hours

DO

· Cold compress 10 minutes at a time for 48 hours
· Blot for 2–3 hours, then rinse gently 1–2x a day
· Sleep with your head raised
· Wear glasses, not contacts, for 7 days

AVOID

· Rubbing, scratching or picking
· Eye makeup for 14 days
· Pools, steam and workouts for 10–14 days
· Lash extensions or lifts for 4 weeks

Touch-up at 6–8 weeks: _____

CALL ME IF

Spreading redness, pus or fever · swelling worse after 72 hours. **Urgent eye care** for eye pain, vision change or discharge. **911** for trouble breathing or face swelling.

Aftercare cards · 4 × 6 in · cut along the dotted lines

AFTERCARE

Saline Tattoo Removal

First 10 days

scab falls off in 7–10 days

DO

· Blot with clean, dry gauze on day 0
· Keep the area completely dry
· Shower with your face away from the water
· Let the scab fall off on its own

AVOID

· Ointment, balm, makeup or creams
· Picking, scratching or soaking the scab
· Sweat, swimming and steam until healed
· Sun, retinoids and acids for 4 weeks

Next session 8+ weeks out: _____

CALL ME IF

Spreading redness, pus or fever · a scab that turns wet or yellow · pain worse after 72 hours. **911** for trouble breathing or face swelling.

AFTERCARE

Scalp Micropigmentation

First 2–4 weeks

flaking done in about 7 days

DO

· Blot with clean gauze for 2–3 hours
· Keep your scalp dry for 3–5 days
· Sleep on your back on a clean pillowcase
· Hat or SPF outdoors once healed

AVOID

· Washing for 3–5 days, then gentle only
· Shaving or clippers until flaking stops
· Sweat, swimming and sauna for 2–4 weeks
· Sun on your scalp, picking or scratching

Next session in 10–14 days: _____

CALL ME IF

Spreading redness, pus or fever · pain or swelling worse after 72 hours · firm bumps later. **911** for trouble breathing or face swelling.

Aftercare cards · 4 × 6 in · cut along the dotted lines

AFTERCARE

Areola Restoration

First 14 days

check the area daily

DO

· Wash hands, rinse gently, pat dry 1–2x a day
· Rice-grain of balm, then a sterile pad
· Soft, clean bra; change it daily
· Look in a mirror daily; you may not feel a problem

AVOID

· Tight or underwire bras while healing
· Picking, scratching or rubbing
· Baths, pools and hot tubs for 14 days
· Sun or tanning for 4 weeks

Patchy color is normal while healing. Your **next session** evens it out.

CALL ME IF

Spreading redness or warmth · pus or fluid after day 3 · fever · swelling or pain near an implant

Questions? Text [Phone]

[Your Business Name]

AFTERCARE

Faux Freckles

First 14 days

tiny scabs flake days 5–7

DO

· Rinse gently 1–2x a day and pat dry
· Rice-grain of balm, if I gave you one
· Wash hands before touching your face
· Clean pillowcase; sleep on your back

AVOID

· Picking or scratching scabs
· Makeup on the area for 14 days
· Pools, saunas and hard workouts for 14 days
· Sun, tanning, retinol and acids for 4 weeks

Some freckles may heal lighter or disappear. That's normal. **SPF daily** once healed.

CALL ME IF

Spreading redness or warmth · pus or fluid after day 3 · fever · firm bumps weeks later
