AFTERCARE

Caring for Your Feet

Soft feet and pretty toes last longer with a little daily care. Here's what to expect and how to keep your feet healthy until your next pedicure.

YOUR LOGO

WHEN	WHAT'S NORMAL	DO	AVOID
Today polish setting	Feet feel soft and smooth. Regular polish stays soft under the surface for hours.	Wear open-toe shoes home. Walk carefully; lotion can make feet slippery.	Tight shoes and socks over fresh polish. Hot tubs and long hot baths tonight.
Days 1–7 settling in	Soles stay softer. Slight tenderness near the cuticles can happen for a day.	Cuticle oil on toenails daily. Lotion on heels and soles, not between toes.	Pools, hot tubs and lakes until any nick has healed. Picking at polish.
Weeks 2–4 everyday care	Calluses slowly rebuild where shoes rub. Gel toes stay glossy.	Gentle foot file on dry skin [weekly]. Clip straight across. Breathable shoes.	Cutting cuticles, digging at nail corners, or razor tools on calluses.
4–6 weeks next visit	Toenails grow out and a gap shows at the base of gel color.	Book your next pedicure. Tell me about health or medication changes.	Peeling or prying gel off at home. It pulls off layers of your nail.

GOOD TO KNOW

- Nails cut straight across are less likely to grow in
- Wear flip-flops in gym showers and pool areas
- Chipped gel? Book a fix rather than peeling it
- Skip shaving your legs right before your next visit
- Dry well between your toes after every shower
- Rotate shoes so each pair dries out between wears
- Sunscreen on the tops of your feet in summer
- A thick, yellow or dark nail should be checked

Step softly
Lotioned feet are slippery today.

Oil daily
Cuticle oil keeps toenails flexible.

Keep dry
Dry toes help prevent fungus.

No peeling
Gel toes are soaked off by me.

CALL ME RIGHT AWAY IF YOU NOTICE

- Redness, swelling or warmth around a nail
- Red streaks spreading up your foot or leg
- Pus, throbbing, or pain that gets worse
- An itchy rash or blisters where product touched

Pus, red streaks, fever or spreading redness: please see a doctor. Diabetes or poor circulation: any cut, blister or sore on your foot, see your doctor the same day.
