How to make them yours

1
In a free Canva account, click Create, then Upload, and choose this PDF.

2
Canva turns every page into an editable design.

3
Add your logo, business name and colors.

4
Download as PDF to print, or fill in on a tablet.

BEFORE YOU USE THESE

These templates are a starting point, not legal or medical advice. Nail rules vary by state and country, so check your state board. Follow each product's instructions, including the matching lamp and cure times, check that every gel you use is legal where you work (for example, TPO-free in the EU and UK), and have a local attorney review your consent forms.

Rather go paperless?

Send, sign and store every one of these forms from your phone with SlickChart.

INFORMED CONSENT & RELEASE · SALON

Nail Service Consent

CLIENT NAME

BIRTH DATE | DATE | NAIL SERVICE(S) I'M CONSENTING TO

WHAT THIS COVERS
Manicures, pedicures, gel polish, builder gel, acrylic, gel extensions, dip powder and nail art.

HOW IT'S DONE
Light filing, products containing acrylates, LED/UV lamp curing, and e-file where used.

REMOVAL
Soaked off with acetone or filed off by a professional. Never pried, picked or peeled.

Possible risks

Allergic reaction. Itching, redness, swelling or blisters near nails or face. Can be permanent.

Skin irritation. Dryness or redness from products, filing or acetone, usually short-lived.

Nail thinning. From filing, e-file work, or product picked, peeled or removed improperly.

Lifting and infection. Lifted product can trap moisture and lead to infection if it isn't fixed.

UV exposure. Lamp curing exposes hands to UV light. SPF or UV-protective gloves are offered.

Future medical care. An acrylate allergy can affect dental work, joint replacements and other medical acrylates.

Nicks or tenderness. Cuticle care and e-file work can leave minor nicks or soreness.

Breaks and wear. Nails can chip, crack or break, most often when used as tools.

Staining. Dark or bright shades can leave light staining on the natural nail.

Odors and fumes. Acrylic liquid and acetone have strong odors. Tell me if they bother you.

Results depend on your nails, health and aftercare. Diabetic, pregnant, on blood thinners or have eczema? Tell me.

UV note: broad-spectrum SPF 30+ (applied 20 minutes before) or UV-protective fingerless gloves are offered.

Please initial each statement

	Initials
I've read the risks above and had my questions answered. No result or wear time was promised.	
My health information is true and complete, including past reactions to nail or dental products.	
I'll tell my nail artist right away about itching, burning, redness or swelling, during or after my service.	
No product goes over broken skin, infection or fungus; my service may be changed or rescheduled.	
I won't pick, peel or bite off product, and I'll book a removal or fix instead of gluing at home.	
I'll follow aftercare and contact you, and a healthcare provider, if a reaction or infection appears.	
I [do / do not] agree to photos of my hands or feet, with no face shown, for my records and portfolio.	
I release [Your Business Name] from claims from details I withheld or aftercare I skipped, per [State] law.	
I am 18 or older (or my guardian signs below), not under the influence, and signing of my own free will.

KNOWN ALLERGIES | DERMATOLOGIST · CLINIC

WHY ACRYLATE ALLERGY MATTERS

Gel, acrylic, dip and nail glue contain acrylates. An allergy can develop after years of safe use, usually when uncured product touches skin, and once it starts it is lifelong. It can also affect future dental work and medical devices. **Nail techs do not do acrylate patch tests:** patch testing is done by a dermatologist.

Screening questions

Question			Details: where, when, what happened
Ever reacted to gel, acrylic, dip or nail glue?	☐ Yes	☐ No	
Itching, redness or swelling after a past nail service?	☐ Yes	☐ No	
Reacted to dental work, dentures or lash glue?	☐ Yes	☐ No	
Diagnosed with an acrylate allergy by a dermatologist?	☐ Yes	☐ No	

Products used on this client

Date	System	Brand · product	Lot #	Lamp	Cure time	Initials

Reaction record

DATE NOTICED | LAST SERVICE · PRODUCT

SYMPTOMS ☐ Itching ☐ Redness ☐ Swelling ☐ Blisters ☐ Lifting ☐ Pain ☐ Dry, cracked skin

WHERE ☐ Nail folds ☐ Fingertips ☐ Eyelids · face ☐ Neck ☐ Other _____

ACTION TAKEN ☐ Product removed ☐ Referred to dermatologist ☐ Manufacturer · FDA notified

Plan going forward

☐ No acrylate services until cleared by a dermatologist

☐ Non-acrylate services only (natural nails, polish)

☐ HEMA-free option discussed (informed choice)

☐ Cleared; dermatologist note on file

HEMA-free is not allergy-proof. Other acrylates can still cause a reaction, so never promise a product is "hypoallergenic."

I've shared my allergy history honestly. I'll report any itching, redness or swelling, and call 911 for trouble breathing.

DEPOSIT · BOOKING · FIXES · CANCELLATION

Booking, Fix & Cancellation Policy

YOUR LOGO

Your appointment is reserved just for you, and full sets, nail art and pedicures can take [1–3] hours. These policies keep things fair for every client and help your nails look their best.

DEPOSIT
[$20] or [30]%
For full sets, extensions and nail art. Non-refundable; applied to your total.

NOTICE TO CHANGE
[24] hours
To move your appointment and keep your deposit.

GRACE PERIOD
[10] minutes
After that, we may need to shorten or reschedule.

Rescheduling	With [24] hours' notice, your deposit moves once. A second change needs a new deposit.
No-show & late change	Your deposit is forfeited. After [2] no-shows, a full prepayment is needed to book.
Late arrival	After [10] minutes we may shorten your service, simplify the design or reschedule.
Fixes & repairs	Lifting or a break within [7] days? We fix it free when it's a service issue. Damage from picking or using nails as tools is [$5] per nail.
Nail art	Priced by detail and time. Share inspiration when you book so we can quote.
Design changes	Changing the design, length or service on the day may change the price and time, or need a new appointment.
Removing other work	Removing another salon's work is [$15]. Tell us when you book so we allow time.
Come prepared	Arrive with clean, bare nails unless removal is booked. Skip shaving or waxing your legs for [48] hours before a pedicure.
Feeling unwell?	Infection, a red or swollen nail fold, open cuts or a rash on your hands or feet? We'll reschedule with no fee. We never work on broken skin.
Refunds	Services can't be refunded once performed; service issues are fixed within the fix window. Please ask before bringing guests or children [your policy].

CARD ON FILE FOR DEPOSITS AND FEES, CHARGED ONLY AS DESCRIBED ABOVE

☐ Card saved in [booking system] ☐ I prefer to prepay Never write card numbers on this form.

INFORMED CONSENT

Gel Polish & Builder Gel Consent

YOUR LOGO

CLIENT NAME _____ NAIL TECH _____ DATE _____

WHAT IT IS
Soak-off gel polish, or a builder gel overlay to strengthen natural nails, cured under an LED or UV lamp.

WHAT TO EXPECT
About [60–90] minutes: gentle prep, thin coats, a short cure per layer. It should never hurt.

HOW LONG IT LASTS
Gel polish about [2–3] weeks. Builder gel infills every [3–4] weeks. Removal is a professional soak-off.

TODAY'S SERVICE ☐ Gel polish ☐ Gel toes ☐ Builder gel ☐ Builder infill ☐ Soak-off ☐ Nail art

POSSIBLE RISKS AND SIDE EFFECTS

- Allergy to acrylates in gel, even after years of use
- Irritation or tenderness of the skin around the nail
- Thinning or peeling from picking or peeling gel off
- A brief heat spike in the lamp while gel cures
- Itching, redness or blisters near nails, face or eyelids
- Lifting or chipping, especially if nails are used as tools
- Infection if lifting is ignored and water gets trapped
- UV exposure to the backs of your hands from the lamp

Quick health and nail check

- Fungus on nails or skin
- Eczema or psoriasis on hands
- Lifting, dark streak, nail change
- Blood thinners or chemo
- Red, swollen or sore nail fold
- Past reaction to gel or acrylic
- Recent nail injury
- Light-sensitizing medication
- Cuts, broken skin or warts
- Acrylate allergy (dental, medical)
- Diabetes or poor circulation
- Pregnant or breastfeeding

☐ **None of these apply to me** or list any that do: _____

About UV and LED lamps. Lamps cure gel with UV light. Skin cancer risk isn't proven, but SPF 30+ (20 minutes before) or UV-protective fingerless gloves are yours to use.

☐ SPF or gloves, please
☐ No thanks

Please initial each statement

	Initials
I've shared my full health, medication and nail history, including past reactions to gel, acrylic or nail glue.	
I understand the risks above. Wear time depends on my nails, lifestyle and home care, and isn't guaranteed.	
I'll tell my nail tech right away if I feel burning or heat in the lamp, or stinging on my skin.	
If I get itching, redness, swelling or blisters, I'll stop gel services and see a doctor or dermatologist.	
I won't pick, peel or bite my gel. Removal is a professional soak-off; peeling pulls off layers of nail.	
I'll book a fix for any lifting within [5–7] days rather than gluing, clipping or soaking it at home.	
Before and after photos for my private record are required. Social media use only with my separate OK.	
Fees follow [Your Business Name] policy. Fix requests within [5–7] days; no refunds after service.	

By signing, I confirm I am 18 or older with photo ID (or have parent or guardian consent per [your policy and local law]), have read this form, had my questions answered, and consent to the gel service I checked above.

CLIENT SIGNATURE _____ DATE _____ NAIL TECH · LICENSE # _____ DATE _____

PRACTITIONER PROTOCOL

Gel Polish & Builder Gel

Cure times in [brackets] follow your gel and lamp maker. Check your state board rules.

SCREEN

Intake cleared. No fungus, infection, broken skin or lifting. Medications reviewed.

ALLERGY CHECK

Ask about past reactions to gel, acrylic or glue. Signs of allergy: refer to a dermatologist.

PRE-CARE

Bare, clean nails; foreign product noted. Every gel legal where you work (EU/UK: TPO-free).

SET UP FIRST ☐ Ventilation on ☐ Nitrile gloves ☐ Implements disinfected ☐ New file and buffer ☐ Lamp matched to gel ☐ SDS on hand ☐ Metal bin for wipes

#	STEP	TIME	HOW
1	**Consult**	10 min	Check nails, skin and lifestyle. Agree length, shape, service and price.
2	**Sanitize hands**	2 min	Both sanitize hands. Nitrile gloves on. Offer SPF or UV gloves.
3	**Cuticle prep**	5–10 min	Push back cuticle. Remove non-living tissue only; never cut living skin.
4	**Buff & dehydrate**	5 min	Remove shine lightly with 180+ grit; don't overfile. Dust off, dehydrate.
5	**Primer & base**	5 min	Primer per manufacturer. Thin base, kept off skin. Cure the full [ ] sec.
6	**Builder & apex**	10–20 min	Slip layer, then a bead; float to set the apex. Cure, cleanse, refine.
7	**Color**	10 min	Thin coats, cap the free edge. Clean gel off skin, then cure each layer.
8	**Top coat & cleanse**	5 min	Cap the edge and cure. Wipe the inhibition layer if required. Cuticle oil.
9	**Finish & photos**	5 min	Check sidewalls, free edge and cuticle line. After photos in good light.
10	**Aftercare & rebook**	5 min	Review aftercare and card. Soak-off in [2–3] weeks, infill in [3–4].
11	**Removal**	15–20 min	File off top coat. Acetone wraps [10–15] min; push gently. Never pry.

ENDPOINT AND SAFETY

- Thin, even coats; free edge capped; clean cuticle line
- Matched lamp, full cure time, output checked
- No uncured gel on skin; clean up before every cure
- Uncured gel wipes go in a sealed metal bin

IF SOMETHING GOES WRONG

- Uncured gel on skin: remove with cleanser on a lint-free wipe, then wash with soap and water.
- Itching, redness or swelling: stop, soak off, refer to a dermatologist. No gel until cleared.
- Nick or bleeding: stop, apply pressure with clean gauze, discard the item. No product on broken skin.
- Heat spike in the lamp: pull the hand out, then cure in short bursts or use a lower-heat lamp.
- Product in the eye: flush with eyewash for 15 minutes, then seek medical care.
- Lifting with a green spot or sore fold: don't cover it. Remove, and refer if it looks infected.

Always write an incident report and check in with the client within 24 to 48 hours.

AFTERCARE

Caring for Your Gel Nails

Your gel is fully cured before you leave. A few easy habits keep it glossy, strong and chip-free, and keep your natural nails healthy underneath.

YOUR LOGO

WHEN	WHAT'S NORMAL	DO	AVOID
First 24 hours fully cured	Nails feel smooth, strong and a little thicker. Any tightness from prep fades quickly.	Apply cuticle oil tonight. Wear gloves for cleaning and washing dishes.	Long hot soaks, hot tubs and saunas. Harsh cleaners or self-tanner on bare hands.
Week 1 enjoy them	Glossy, chip-free nails. A tiny gap may show at the cuticle by the end of the week.	Cuticle oil daily and hand cream after washing. Dry your nails well after water.	Opening cans, scraping labels or picking at edges. Your nails are jewels, not tools.
Weeks 2–3 growing out	Regrowth shows at the cuticle. Free edges can wear a little at the tips.	Smooth any snag with a fine file. Book your next visit before you leave.	Picking, peeling or biting gel. It pulls off layers of your natural nail with it.
Fill time next visit	Gel polish is ready to soak off at [2–3] weeks; builder gel needs an infill at [3–4] weeks.	Come in for a professional soak-off or infill. Tell me about new medications or allergies.	Leaving gel on for many weeks, or removing it at home by peeling, prying or clipping.

GOOD TO KNOW

- Acetone-based removers can dull the shine
- Water trapped under lifting can lead to infection
- Short to medium lengths wear the longest
- Sunscreen and bug spray can soften top coat; wipe off
- A lifted edge? Book a fix; don't glue or clip it
- Oil keeps gel flexible, so it chips and lifts less
- Your nails rest best with oil and time between sets
- Keep a fine file handy; never use clippers on gel

Oil daily
Cuticle oil keeps nails and gel flexible.

Gloves on
Cleaning, dishes and gardening.

Hands off
No picking, peeling or biting.

Pro removal
Soak-off only, never pry or peel.

CALL ME RIGHT AWAY IF YOU NOTICE

- Itching, redness or a rash around your nails
- Lifting, or a gap opening under the gel
- Swelling or blisters on fingertips, face or eyelids
- A green or dark spot under the gel

Pain, heat, throbbing or pus around a nail: see your doctor. Swelling of the face or throat, or trouble breathing: call 911.

WHAT IT IS
Liquid and powder blended into a bead and sculpted over your nail or a tip for length and strength.

WHAT TO EXPECT
About [1.5–2.5] hours for a full set, [60–90] minutes for a fill. There is a strong odor; we ventilate.

HOW LONG IT LASTS
Acrylic grows out with your nail. Fills every [2–3] weeks; removal is an acetone soak, never prying.

TODAY'S SERVICE ☐ Full set ☐ Fill ☐ Overlay ☐ Tips ☐ Sculpted on forms ☐ Soak-off removal

POSSIBLE RISKS AND SIDE EFFECTS

- Allergy to acrylates in the liquid, even after years of use
- Eye, nose or throat irritation or headache from odor
- Nail thinning from picking, prying or improper removal
- Soreness or pressure for a day after a new set
- Itching, redness or blisters near nails, face or eyelids
- Lifting, cracks or breaks, especially at long lengths
- Infection if lifting is ignored and moisture is trapped
- UV lamp exposure with gel top coat; SPF offered

About monomer odor and ventilation. We use MMA-free, EMA-based liquid and table ventilation; its safety sheet is yours to read. Pregnant, asthma or fume-sensitive? Ask your doctor first.

Initials _____

Quick health and nail check

- Fungus on nails or skin
- Eczema or psoriasis on hands
- Lifting, dark streak, nail change
- Asthma or sensitive to fumes
- Red, swollen or sore nail fold
- Past reaction to acrylic or gel
- Diabetes or poor circulation
- Pregnant or breastfeeding
- Cuts, broken skin or warts
- Acrylate allergy (dental, medical)
- Blood thinners or chemo
- Enhancements from another salon

☐ **None of these apply to me** or list any that do: _____

Please initial each statement

	Initials
I've shared my full health, medication and nail history honestly, including past reactions to nail products.	
I understand the risks above. Wear depends on my nails, length and lifestyle, and isn't guaranteed.	
I'll speak up right away if my eyes, nose or throat feel irritated, or my skin stings, burns or gets hot.	
If I get itching, redness, swelling or blisters, I'll stop acrylic services and see a doctor or dermatologist.	
I'll book a fix for lifting or breaks within [5–7] days. I won't glue, pry, clip or bite my nails at home.	
Removal is an acetone soak by a professional. Removing another salon's enhancements costs [$ fee].	
Before and after photos for my private record are required. Social media use only with my separate OK.	
Deposits and fees follow [Your Business Name] policy. Price may change with length, shape or nail art.	

By signing, I confirm I am 18 or older (or have parent or guardian consent per [your policy and local law]), have read this form, had my questions answered, and consent to an acrylic nail service with [product name].

CLIENT SIGNATURE _____ DATE _____ NAIL TECH · LICENSE # _____ DATE _____

PRACTITIONER PROTOCOL

Acrylic Nails

Ratios and times in [brackets] follow your acrylic brand. Check OSHA and state board rules.

SCREEN

Intake cleared. No fungus, infection, broken skin or lifting. Medications reviewed.

ALLERGY CHECK

Ask about past reactions to acrylic, gel or glue. Signs of allergy: refer to a dermatologist.

PRE-CARE SENT

Arrive with bare nails; another salon's product noted for removal. Liquid is EMA, never MMA.

SET UP FIRST ☐ Source-capture ventilation on ☐ SDS read and on hand ☐ Nitrile gloves, fresh pair ☐ Implements disinfected ☐ New file, buffer, band or bit ☐ Lidded dappen dish ☐ Self-closing metal bin

#	STEP	TIME	HOW
1	**Consult & screen**	10 min	Check nails and skin. Agree length, shape, design and price.
2	**Sanitize hands**	2 min	Both sanitize hands. Nitrile gloves on. Note any allergy history.
3	**Cuticle prep**	5–10 min	Push back cuticle. Remove non-living tissue only; never cut living skin.
4	**Buff & dehydrate**	5 min	Remove shine lightly with 180+ grit; don't overfile. Dust off, dehydrate.
5	**Tips or forms**	10–15 min	Size tips sidewall to sidewall and blend, or fit forms snugly.
6	**Primer**	2 min	Primer per manufacturer, on natural nail only. Keep it off the skin.
7	**Bead & zones**	20–40 min	Medium-wet bead. Zone 1 free edge, 2 apex, 3 thin at cuticle.
8	**File & shape**	15–20 min	Once set, shape with 100–180 grit. Low speed, no heat spikes.
9	**Seal & finish**	10 min	Buff, cleanse, seal with top coat or polish. Cuticle oil. After photos.
10	**Aftercare & removal**	5 min	Fill in [2–3] weeks. Removal: file off bulk, acetone soak, never pry.

ENDPOINT AND SAFETY

- Balanced apex, thin cuticle zone, clean sidewalls
- Dappen dish lidded; never pour liquid back
- No product on skin; wipe the brush, don't flood
- Monomer and acetone are flammable: no flames

MMA liquid is unsafe for nails: FDA calls it inappropriate and many states ban it. Signs: harsh odor, rock-hard, won't soak off. Use EMA liquid from a professional brand; keep the SDS.

IF SOMETHING GOES WRONG

- Liquid or wet product on skin: wipe off at once, then wash with soap and water.
- Itching, redness or swelling: stop, soak off, refer to a dermatologist. No acrylates until cleared.
- Dizzy, headache or wheezing: stop, fresh air. Call 911 if breathing is affected.
- Heat as product sets: pause and lift the hand; use a wetter bead and thinner layers.
- Liquid in the eye: flush with eyewash for 15 minutes, then seek medical care.
- Lifting with a green or dark spot: don't fill over it. Remove, refer if infected.

Always write an incident report and check in with the client within 24 to 48 hours.

Caring for Your Acrylic Nails

Acrylics are strong, but your natural nail is still growing underneath. A few easy habits keep your set secure and healthy until your next fill.

YOUR LOGO

WHEN	WHAT'S NORMAL	DO	AVOID
First 24 hours new set	A faint product smell. New length can feel heavy or tight for a day or two.	Apply cuticle oil tonight. Wear gloves for cleaning and washing dishes.	Hot tubs, saunas and harsh cleaners. Using your new nails to pry or pull.
Week 1 enjoy them	Strong, smooth nails. A little new growth may show at the cuticle by week's end.	Cuticle oil daily. Dry hands well after washing. Treat nails as jewels, not tools.	Opening cans, scraping, picking or biting. These cause lifting and breaks.
Weeks 2–3 growing out	A gap at the cuticle as nails grow, so the weight shifts toward the tips.	Book your fill every [2–3] weeks. Come in for a fix if any edge starts to lift.	Gluing, clipping or soaking lifted spots at home. Trapped water can cause infection.
Fill time next visit	Without a fill, nails get top-heavy and more likely to crack or break.	Book a fill or a professional soak-off. Tell me about new medications or allergies.	Prying, peeling or biting off acrylics. It tears off layers of your natural nail.

GOOD TO KNOW

- Long or pointed shapes need extra care
- Typing and buttons take a few days to get used to
- A break? Keep the piece, file it smooth and call me
- Short breaks between sets let your nails rest
- Acetone and cleaners soften acrylic; wear gloves
- Keep a fine file for snags; never use nail clippers
- Oil keeps acrylic flexible, so it lifts and cracks less
- Lifting is a fix appointment, not a home repair

Oil daily
Cuticle oil morning and night.

Gloves on
Cleaning, dishes and gardening.

Fill on time
Every [2–3] weeks keeps them balanced.

Never pry
Removal is a professional soak.

CALL ME RIGHT AWAY IF YOU NOTICE

- Itching, redness or a rash around your nails
- Lifting, or a gap opening under the acrylic
- Swelling or blisters on fingertips, face or eyelids
- A green or dark spot under the acrylic

Pain, heat, throbbing or pus around a nail: see your doctor. Swelling of the face or throat, or trouble breathing: call 911.

LENGTH & SHAPE _____

CUTICLE OIL TO USE _____

YOUR NEXT FILL DATE _____

INFORMED CONSENT

Gel Extension Consent

YOUR LOGO

CLIENT NAME _____ NAIL TECH _____ DATE _____

WHAT IT IS
Length built with gel: soft gel tips bonded with gel adhesive, or hard or builder gel on forms.

WHAT TO EXPECT
About 1.5 to 2.5 hours. Each layer cures under an LED or UV lamp. Nails may feel snug for a day.

HOW LONG IT LASTS
Fill or rebalance every [3–4] weeks. Soft gel soaks off; hard gel is filed off by your nail tech.

POSSIBLE RISKS AND SIDE EFFECTS

- Allergy to (meth)acrylates, which is lifelong
- Lifting, which can trap water and invite infection
- Breaks or cracks, more likely with extra length
- Sensitivity to glue (cyanoacrylate), if used
- Redness, itching or irritation around the nail
- Nail thinning from peeling or improper removal
- Brief heat or warmth as gel cures
- Infection if lifts or breaks aren't fixed promptly

An acrylate allergy can also affect future dental, joint and medical treatments that use acrylates.

Quick health and nail check

- Nail or skin fungus
- Eczema or psoriasis on hands
- Recent nail injury
- Blood thinners or chemo
- Pregnant or breastfeeding
- Red, swollen or sore nail folds
- Past reaction to gel or acrylic
- Dark streak or nail changes
- Immune suppression
- Very thin or bitten nails
- Cuts, warts or broken skin
- Allergy to glue or adhesives
- Diabetes or poor circulation
- Photosensitizing medication
- Hands often in water at work

☐ **None of these apply to me** or list any that do: _____

Today's service ☐ Soft gel tips ☐ Hard gel on forms ☐ Builder gel ☐ Fill / rebalance ☐ Removal

Please initial each statement

	Initials
I've shared my full health and nail history honestly, including any past reaction to nail products.	
I understand the risks above, including acrylate allergy, which can develop at any time and is lifelong.	
I'll tell my nail tech right away about heat, burning, itching or pain, during the service or after it.	
We agreed on length and shape. Longer nails break more easily, and breaks from misuse aren't covered.	
I'll follow my aftercare and book fills on time. I'll come in for lifts or breaks, not glue them at home.	
I won't pry, peel or bite off my extensions. Removal is by a professional only.	
Fixes within [5–7] days are free for service issues; damage from misuse is charged per [your policy].	
Before and after photos for my private record are OK. Social media use only with my separate OK.	

By signing, I confirm I am 18 or older (or have parent or guardian consent per [your policy and local law]), have read this form, had my questions answered, and consent to the gel extension service I checked above and future fills.

CLIENT SIGNATURE _____ DATE _____ NAIL TECH SIGNATURE · LICENSE # _____ DATE _____

PRACTITIONER PROTOCOL

Gel Extensions

Follow your state board rules and each brand's instructions and lamp pairing. Times vary by system.

SCREEN

Intake cleared. No fungus, infection, broken skin or lifting. Defer and refer if found.

ALLERGY CHECK

Ask about itching or rash after past gel. Any reaction: no acrylates; refer to a dermatologist.

PRE-CARE SENT

Arrive with bare nails or book removal time. No hand cream or oil on the day.

SET UP FIRST ☐ Hands washed, gloves on ☐ Implements disinfected ☐ New files and buffers ☐ Lamp matched to gel, timer set ☐ Tips sized, forms ready ☐ Ventilation on, SDS in reach

#	STEP	TIME	HOW
1	**Screen & consent**	5 min	Review health changes, check consent is signed, photograph bare nails.
2	**Prep natural nail**	10 min	Push back cuticle; trim loose dead tissue only. Buff off shine, 180+ grit.
3	**Size tips**	5 min	Soft gel tips: fit each sidewall to sidewall. Etch the tip underside.
4	**Dehydrate & prime**	2 min	Dehydrator, then primer per brand. Don't touch the nail plate after.
5	**Bond or sculpt**	20–40 min	Tips: gel adhesive, flash cure, then full cure. Forms: fit snug, build length.
6	**Cure fully**	Per layer	Lamp matched to the gel, full stated time. Clean any gel off skin first.
7	**Shape**	10–15 min	File to the agreed length and shape. Check sidewalls are straight.
8	**Builder for strength**	10–20 min	Thin builder layer with the apex at the stress area. Cure.
9	**Color & top coat**	10–20 min	Gel color if booked, cap the free edge, top coat. Cure; wipe if required.
10	**Finish & check**	5 min	Cuticle oil. Check for sharp edges, lifting or gel on skin. After photos.
11	**Aftercare & rebook**	5 min	Review sheet and card. Book a fill at [3–4] weeks before they leave.

ENDPOINT AND SAFETY

- Smooth, even apex; no gel on skin or cuticles
- Removal: soft gel soaks off; hard gel is filed off
- Length suits the nail bed and [length policy]
- Uncured wipes go in a sealed metal bin

IF SOMETHING GOES WRONG

- Heat spike in the lamp: hand out, wait, resume. Use thinner layers.
- Glue or product in the eye: flush at the eyewash 15 minutes; seek care.
- Cut or nick: stop, clean, cover. No product on broken skin.
- Gel or adhesive on skin: remove before curing. Note it on the record.
- Itching, redness or blisters: remove product. No acrylates until a dermatologist assesses.
- Green spot or red, sore fold at a fill: remove, no new product, refer.

Always write an incident report and check in with the client within 24 to 48 hours.

AFTERCARE

Caring for Gel Extensions

Your extensions are bonded to your natural nails, so caring for one protects the other. A few simple habits keep them strong, smooth and lasting until your next fill.

YOUR LOGO

WHEN	WHAT'S NORMAL	DO	AVOID
Day one settling in	Nails may feel snug, thicker or a little tight. That eases within a day.	Apply cuticle oil. Get used to the length; use finger pads, not tips.	Very hot water, saunas and long soaks. Picking at any rough edge.
Daily care every day	A small gap appears at the cuticle as your natural nail grows.	Cuticle oil twice a day. Gloves for dishes, cleaning and gardening.	Using nails as tools. Acetone, solvents or harsh cleaners on bare hands.
Weeks 3–4 fill time	Growth shows at the base and the balance point moves toward the tip.	Book your fill or rebalance. Come in with clean hands and no lotion.	Stretching past [4] weeks. Clipping, filing down or gluing at home.
Removal when it's time	Natural nails may feel softer or thinner for a few weeks after.	Book a professional removal. Soft gel soaks off; hard gel is filed off.	Peeling, prying or biting them off. It strips layers of your nail.

Lifting

If an edge lifts, water can get trapped underneath and invite infection. Come in within [5–7] days, and never glue it down at home.

Length

Longer nails need more care. Open cans and press buttons with a tool or your finger pad.

Oil daily

Cuticle oil keeps gel flexible and skin healthy.

Wear gloves

For cleaning, dishes and anything with chemicals.

Jewels, not tools

No prying lids, scraping labels or opening cans.

Fix it early

Lift or crack? Book a repair, don't glue.

CALL ME RIGHT AWAY IF YOU NOTICE

- Itching, redness or swelling around your nails
- A green, yellow or dark spot under a nail
- A rash on your fingers, eyelids, face or neck
- Pain, throbbing or a nail lifting from its bed

These can mean an allergy or infection. I'll remove the product; see your doctor or a dermatologist too.

Face or throat swelling or trouble breathing: call 911.

Dip Powder Consent

YOUR LOGO

CLIENT NAME _____ NAIL TECH _____ DATE _____

WHAT IT IS
Colored powder layered over a bonding base, then hardened with an activator. No lamp is needed.

WHAT TO EXPECT
About 60 to 90 minutes, including filing and shaping. Nails may feel a little thicker at first.

HOW LONG IT LASTS
Wears about [3–4] weeks. Removal is a light file-off and acetone soak, never peeling.

TODAY'S SERVICE ☐ Full set ☐ Full set with tips ☐ French / ombre ☐ Removal

POSSIBLE RISKS AND SIDE EFFECTS

- Allergy to the cyanoacrylate base or activator
- Lifting, which can trap water and invite infection
- Dry or brittle nails after acetone removal
- Stinging if activator touches broken skin
- Redness, itching or irritation around the nail
- Nail thinning from peeling or improper removal
- Chips or breaks, more likely with extra length
- Infection if lifts or breaks aren't fixed promptly

Quick health and nail check

- Nail or skin fungus
- Eczema or psoriasis on hands
- Recent nail injury
- Blood thinners or chemo
- Red, swollen or sore nail folds
- Past reaction to dip or glue
- Dark streak or nail changes
- Pregnant or breastfeeding
- Cuts, warts or broken skin
- Allergy to acrylates or gel
- Diabetes or poor circulation
- Asthma or sensitive to fumes

☐ **None of these apply to me** or list any that do: _____

About hygiene. Your fingers never go into a shared jar. Powder is poured over each nail or taken from a fresh single-use portion, and leftovers are thrown away.

☐ Poured over nail
☐ Single-use portion

Please initial each statement

	Initials
I've shared my full health and nail history honestly, including any reaction to glue or nail products.	
I understand the risks above. Results depend on my natural nails and care, and wear isn't guaranteed.	
I'll tell my nail tech right away about burning, stinging or itching at any point during the service.	
We agreed on length and shape. Longer nails chip more easily, and breaks from misuse aren't covered.	
I'll book removal or a new set on time, and won't peel, pick or bite off my dip. Removal is professional only.	
I'll follow my aftercare, including cuticle oil, gloves for chores, and coming in for any lifting.	
Before and after photos for my private record are OK. Social media use only with my separate OK.	
Fees follow [Your Business Name] policy. Fixes within [5–7] days; no refunds after service.

PRACTITIONER PROTOCOL

Dip Powder Nails

Follow each brand's instructions for base, activator and top coat timing. Check your state board rules.

SCREEN

Intake cleared. No fungus, infection, broken skin or lifting. Defer and refer if found.

ALLERGY CHECK

Ask about reactions to glue, dip or gel. Any reaction: no service today; refer to a dermatologist.

PRE-CARE SENT

Arrive with bare nails or book removal time. No hand cream or oil on the day.

SET UP FIRST ☐ Hands washed, nitrile gloves on ☐ Implements cleaned and disinfected ☐ New files and buffers ☐ Fresh single-use powder portion ☐ Base, activator, top coat capped ☐ Ventilation on, SDS in reach

#	STEP	TIME	HOW
1	**Screen & consent**	5 min	Review health changes, check consent is signed, photograph bare nails.
2	**Prep**	10 min	Push back cuticle; trim loose dead tissue only. Buff off shine, 180+ grit.
3	**Dehydrate & prime**	2 min	Dehydrator, then bond or primer per brand. Don't touch the plate after.
4	**Tips, if booked**	10 min	Size sidewall to sidewall, adhere, cut and blend. Skip for natural length.
5	**Base**	Per nail	Thin base, kept off cuticle and skin. Work one or two nails at a time.
6	**Apply powder**	Per layer	Pour powder over the nail from a single-use portion. Never a shared jar.
7	**Repeat layers**	2–3 layers	Base, then powder each time; build the apex. Tap off excess.
8	**Activator**	2 min	Brush on generously; wait per brand. Discard leftover powder.
9	**File & shape**	10–15 min	Shape and smooth to the agreed design. Check sidewalls and thickness.
10	**Top coat**	5 min	Second activator if required, then two thin top coats. Cap the free edge.
11	**Aftercare & rebook**	5 min	Cuticle oil, after photos. Review the card. Book at [3–4] weeks.

ENDPOINT AND SAFETY

- Smooth, even thickness; nothing on skin or cuticle
- Removal: file top coat, acetone soak 10–15 min
- Leftover powder discarded, never back in the jar
- Never pry; never overfile the natural nail plate

IF SOMETHING GOES WRONG

- Product in the eye: flush with eyewash or cool running water for 15 minutes, then seek medical care.
- Base bonds to skin: don't pull. Hold acetone on a cotton pad until it releases.
- Hives, swelling or wheezing: stop and remove product. Call 911 if breathing is affected.
- Activator or base stings broken skin: wipe off, rinse, and skip that nail today.
- Itching, redness or blisters: stop, remove product, refer to a dermatologist.
- Green spot or a red, sore fold under lifting: remove, no new product, refer to a physician.

Always write an incident report and check in with the client within 24 to 48 hours.

AFTERCARE

Caring for Dip Powder Nails

Dip powder is strong and long-wearing, and a little daily care keeps it that way. These habits protect your manicure and the natural nails underneath.

YOUR LOGO

WHEN	WHAT'S NORMAL	DO	AVOID
Day one fully setting	Nails may feel thicker or a little snug. The top coat keeps hardening for a day.	Apply cuticle oil. Get used to the feel; use your finger pads, not your nail tips.	Very hot water, saunas, hot tubs and long soaks. Picking at any rough edge.
Weeks 1–2 everyday wear	Color stays glossy. A small gap shows at the cuticle as your natural nails grow.	Cuticle oil twice a day. Gloves for dishes, cleaning, gardening and any chemicals.	Using nails as tools. Acetone, solvents or harsh cleaners on bare hands.
Weeks 3–4 time for a new set	Growth is visible, and edges may start to chip or lift.	Book removal or a new set every [3–4] weeks. No lotion that day.	Clipping, filing down or regluing at home, or painting over a lift.
Removal professional only	Nails may feel dry or a little softer for a few days after the acetone soak.	Professional file-off and acetone soak. Cuticle oil and hand cream after.	Peeling, prying or biting off dip. It strips layers of your natural nail.

GOOD TO KNOW

- Cuticle oil keeps dip flexible and less likely to crack
- Hand sanitizer is fine; follow with cuticle oil
- Long baths soften dip; dry your hands well
- Lifting traps water; come in within [5–7] days
- Self-tanner and strong dyes can stain; wear gloves
- Your powder was a single-use portion, never shared

Oil daily
Morning and night, into skin and nail edges.

Wear gloves
For dishes, cleaning and chemicals.

Jewels, not tools
No prying lids or opening cans.

Fix it early
Lift or chip? Book a repair, don't glue.

CALL ME RIGHT AWAY IF YOU NOTICE

- Itching, redness or swelling around your nails
- A green, yellow or dark spot under a nail
- A rash or blisters on fingers, eyelids or face
- Pain, throbbing or a nail lifting from its bed

Swelling of the face, eyes or throat, or trouble breathing: call 911. Signs of infection or allergy: see your doctor or a dermatologist.

CLIENT NAME _____ NAIL ARTIST _____ DATE _____

WHAT IT IS
A warm soak, nail shaping, gentle cuticle and callus care, massage, then polish or gel.

WHAT TO EXPECT
About [45–75] minutes. Your foot spa is cleaned and disinfected before you sit down.

HOW LONG IT LASTS
Polish about [1–2] weeks, gel toes about [3–4] weeks. Book every [4–6] weeks.

TODAY'S SERVICE ☐ Spa pedicure ☐ Gel toes ☐ Gel removal ☐ Nail art ☐ Other: [ ]

POSSIBLE RISKS AND SIDE EFFECTS

- Minor nicks or tenderness around the nail folds
- Redness or irritation from soaks, scrubs or lotion
- Tender soles if callus is reduced too far
- Thinned toenails if gel is peeled off at home
- Infection if skin is broken, cut or not yet healed
- Allergic reaction to polish, gel or another product
- Soreness at an ingrown or curved nail edge
- Slipping on lotioned feet or a wet floor

Diabetes, neuropathy or poor circulation? Please bring your physician's OK. I'll use lukewarm water, skip all cutting and smooth calluses gently with a file only.

☐ Doesn't apply to me
☐ Physician OK on file

Quick health and foot check

- Diabetes
- Blood thinners
- Cuts, scratches or bug bites
- Ingrown or infected toenail
- Legs shaved or waxed in 48 hrs
- Neuropathy or numb feet
- Chemo or immune suppression
- Open sores or warts
- Eczema or psoriasis on feet
- Allergy to gel or acrylates
- Poor circulation
- Pregnant
- Athlete's foot or nail fungus
- Swollen feet or ankles
- Recent foot surgery or injury

☐ **None of these apply to me** or list any that do: _____

Please initial each statement

	Initials
I've shared my full health history honestly, including diabetes, circulation and medications.	
I haven't shaved, waxed or used hair removal cream on my legs in the last [24–48] hours.	
I'll reschedule if I have cuts, bites, sores, fungus or any infection on my feet or legs.	
I understand calluses are smoothed gently with a file. No blades are used on my skin.	
I'll speak up right away if the water feels too hot, or anything stings, pinches or hurts.	
I'll walk carefully afterward. Lotion and oil can make my feet and the floor slippery.	
Before and after photos for my private record are OK. Social media use only with my separate OK.	
Deposits and fees follow [Your Business Name] policy. Gel toes are soaked off, never peeled.	

By signing, I confirm I am 18 or older (or have parent or guardian consent per [your policy and local law]), have read this form, had my questions answered, and consent to a pedicure and the services checked above.

Pedicure & Gel Toes

Times in [brackets] follow your products, foot spa maker and the client's feet. Check your state board rules.

SCREEN
Intake cleared. No cuts, bites, open sores, fungus or infection on feet or legs.

CHECK
Diabetes, neuropathy or poor circulation: physician OK, lukewarm water, no cutting.

PRE-CARE SENT
No shaving, waxing or hair removal cream on legs for [24–48] hours. Open-toe shoes.

SET UP FIRST ☐ Basin disinfected, log signed ☐ Liner in, water temp checked ☐ Disinfected nippers, clippers ☐ New file, buffer, separators ☐ Fresh towels, gloves on ☐ Gel, matched lamp, gauze

#	STEP	TIME	HOW
1	**Consult & foot check**	5 min	Check feet and legs in good light. Confirm health changes, physician OK.
2	**Consent & photos**	3 min	Consent signed. Before photos. Note any nail or skin concerns.
3	**Remove polish**	[ ] min	Polish remover. Gel: file off topcoat, acetone soak, push gently. Never pry.
4	**Soak**	5–10 min	Warm water checked by hand. Lukewarm for diabetes or neuropathy.
5	**Clip & shape**	5 min	Clip straight across, not too short. Smooth corners; don't dig in.
6	**Cuticle care**	5 min	Softener, push back gently. Nip only loose, non-living tissue.
7	**Callus care**	5 min	Foot file only, light pressure. No credo blades or razors on skin.
8	**Scrub & massage**	10 min	Exfoliate, rinse, massage with lotion. Light touch over veins and swelling.
9	**Polish or gel**	15 min	Cleanse nail plates. Thin coats off the skin; cure each per the lamp.
10	**Finish & aftercare**	5 min	Wipe lotion off soles. Help client stand. Review sheet and card.

FOOT SPA CLEANING

EPA-registered hospital disinfectant, full label contact time

Every client
Drain, scrub, rinse. Refill, disinfect for [ ] min, drain, dry.

Every night
Remove screens and jets, scrub, disinfect, flush per maker.

Liners
Single-use liner per client; still disinfect the basin.

Log it
Date, time and initials for every clean. Keep [ ] years.

Endpoint: nails clipped straight across with smooth edges, calluses softened, not removed, no broken skin, gel fully cured. **Safety:** never cut living skin, check water by hand, and wipe soles before the client stands.

IF SOMETHING GOES WRONG

- Nick or bleeding: stop, fresh gloves, sterile gauze.
- Press until it stops, antiseptic, then a bandage.
- Bag contaminated items in a sealed bag, discard.
- Disinfect tools and station before you go on.
- Water too hot or skin red: cool water, end soak.
- Slip or fall: seat client, first aid, 911 if needed.

Signs of infection later, or any wound on a diabetic client: refer to a physician. Write an incident report.

AFTERCARE

Caring for Your Feet

Soft feet and pretty toes last longer with a little daily care. Here's what to expect and how to keep your feet healthy until your next pedicure.

YOUR LOGO

WHEN	WHAT'S NORMAL	DO	AVOID
Today polish setting	Feet feel soft and smooth. Regular polish stays soft under the surface for hours.	Wear open-toe shoes home. Walk carefully; lotion can make feet slippery.	Tight shoes and socks over fresh polish. Hot tubs and long hot baths tonight.
Days 1–7 settling in	Soles stay softer. Slight tenderness near the cuticles can happen for a day.	Cuticle oil on toenails daily. Lotion on heels and soles, not between toes.	Pools, hot tubs and lakes until any nick has healed. Picking at polish.
Weeks 2–4 everyday care	Calluses slowly rebuild where shoes rub. Gel toes stay glossy.	Gentle foot file on dry skin [weekly]. Clip straight across. Breathable shoes.	Cutting cuticles, digging at nail corners, or razor tools on calluses.
4–6 weeks next visit	Toenails grow out and a gap shows at the base of gel color.	Book your next pedicure. Tell me about health or medication changes.	Peeling or prying gel off at home. It pulls off layers of your nail.

GOOD TO KNOW

- Nails cut straight across are less likely to grow in
- Wear flip-flops in gym showers and pool areas
- Chipped gel? Book a fix rather than peeling it
- Skip shaving your legs right before your next visit
- Dry well between your toes after every shower
- Rotate shoes so each pair dries out between wears
- Sunscreen on the tops of your feet in summer
- A thick, yellow or dark nail should be checked

Step softly
Lotioned feet are slippery today.

Oil daily
Cuticle oil keeps toenails flexible.

Keep dry
Dry toes help prevent fungus.

No peeling
Gel toes are soaked off by me.

CALL ME RIGHT AWAY IF YOU NOTICE

- Redness, swelling or warmth around a nail
- Red streaks spreading up your foot or leg
- Pus, throbbing, or pain that gets worse
- An itchy rash or blisters where product touched

Pus, red streaks, fever or spreading redness: please see a doctor. Diabetes or poor circulation: any cut, blister or sore on your foot, see your doctor the same day.

PRODUCTS TO USE

YOUR POLISH SHADE

YOUR NEXT PEDICURE

INFORMED CONSENT

Manicure & E-File Consent

YOUR LOGO

CLIENT NAME _____ NAIL ARTIST _____ DATE _____

WHAT IT IS
Nail shaping, cuticle care and your choice of finish. An e-file may be used to refine cuticles.

WHAT TO EXPECT
About [30–60] minutes. A dry, no-soak manicure uses an e-file instead of a soak.

HOW LONG IT LASTS
Neat cuticles last about [2–3] weeks and polish about [5–7] days. Book every [2–4] weeks.

POSSIBLE RISKS AND SIDE EFFECTS

- Small nicks or tenderness at the cuticle line
- Infection if skin is broken and not kept clean
- Brief warmth or vibration from the e-file
- Allergic reaction to an oil, lotion or polish
- Redness or a sore nail fold for a day or two
- Thin or heat-sensitive nails if overfiled
- Hangnails if cuticles are then cut at home
- Results vary with thick or very dry cuticles

Only loose, non-living cuticle is removed; living skin is never cut. Rules on cutting vary by state.

Quick health and nail check

- Diabetes
- Chemo or immune suppression
- Red, swollen or sore nail fold
- Lifting or recent nail injury
- Gel or acrylic recently removed
- Blood thinners
- Pregnant
- Nail fungus or warts
- Dark streak or nail changes
- Allergy to nail products
- Poor circulation, neuropathy
- Cuts, hangnails or torn skin
- Eczema or psoriasis on hands
- Very thin or peeling nails
- Bites nails or picks cuticles

☐ **None of these apply to me** or list any that do: _____

TODAY'S SERVICE ☐ Natural manicure ☐ Cuticle care ☐ E-file (dry) manicure ☐ Polish

Please initial each statement

	Initials
I've shared my full health history honestly, including diabetes, blood thinners and skin conditions.	
I understand only loose, non-living cuticle is removed, and living skin is never cut.	
I agree to e-file use by a trained nail artist, with a disinfected bit or a new sanding band.	
I'll speak up right away if anything feels hot, stings, pinches or hurts, so we can stop.	
A small nick can happen. It will be cleaned and covered, and I'll watch it for signs of infection.	
I'll follow my aftercare, use cuticle oil daily, and won't cut or pick my cuticles at home.	
Deposits, fees and fixes follow [Your Business Name] policy. Removal or repairs may cost extra.	
Before and after photos for my private record are OK. Social media use only with my separate OK.	

By signing, I confirm I am 18 or older (or have parent or guardian consent per [your policy and local law]), have read this form, had my questions answered, and consent to a manicure, cuticle care and e-file use as checked above.

CLIENT SIGNATURE _____ DATE _____ NAIL ARTIST · LICENSE # _____ DATE _____

PRACTITIONER PROTOCOL

Manicure & E-File

Follow your state board rules on cuticle work and your e-file maker's instructions. Times are typical.

SCREEN

Intake cleared. No infection, fungus, open cuts or eczema flare. Nail folds not red or swollen.

CHECK

Diabetes, blood thinners or chemo: gentlest care, no cutting, physician OK before e-file work.

PRE-CARE SENT

Arrive with clean nails. Don't cut, pick or bite cuticles before the visit.

SET UP FIRST ☐ Hands washed, gloves on ☐ Bits cleaned and disinfected ☐ New sanding band, file, buffer ☐ Disinfected nippers, pusher ☐ E-file checked, speed low ☐ Dust collector, gauze, antiseptic

#	STEP	TIME	HOW
1	**Consult & screen**	10 min	Check hands, nail folds and plates in good light. Confirm health changes.
2	**Consent & photos**	5 min	Consent signed. Before photos. Note cuticle and nail plate condition.
3	**Sanitize & remove**	5 min	Client washes or sanitizes hands. Remove polish fully.
4	**Shape**	5 min	180+ grit file, light strokes. Length and shape as agreed.
5	**Lift cuticle**	3 min	Push back the eponychium gently. Lift non-living cuticle off the plate.
6	**E-file cuticle**	10 min	Trained tech only. Fine safety bit, low-moderate speed, keep it moving.
7	**Tidy**	5 min	Nip only loose, non-living tissue. Never cut living skin.
8	**Inspect**	2 min	Good light: look for hangnails, redness or nicks. Buff edges smooth.
9	**Cleanse**	2 min	Brush off dust. Wipe plates to remove oils before any polish.
10	**Finish**	10 min	Base, polish and top coat, or buff to shine. Oil once polish is dry.
11	**Aftercare & rebook**	5 min	Review sheet and card. Book in [2–4] weeks. Bits to cleaning.

ENDPOINT AND SAFETY

- Clean cuticle line, no redness, no broken skin
- Heat felt? Lift off, slow down, lighten touch
- Never use coarse bits on the natural nail plate
- Disinfect bits after every client, or new band

IF SOMETHING GOES WRONG

- Nick or bleeding: stop, fresh gloves, firm pressure with sterile gauze.
- Bag gauze and contaminated items in a sealed bag, then discard.
- Heat spike or burning: lift the bit, let the nail cool, lower speed.
- Once it stops: antiseptic and a bandage. No product over broken skin.
- Clean and disinfect bits, tools and station before you continue.
- Overfiled or thin spot: stop filing there and note it on the record.

Redness, swelling, warmth or pus later: refer to a physician. Write an incident report.

AFTERCARE

Caring for Your Nails

Neat cuticles and smooth nails last longer with a little daily care. These simple habits keep your nails strong until your next visit.

YOUR LOGO

WHEN	WHAT'S NORMAL	DO	AVOID
Today fresh cuticles	A crisp cuticle line. Skin may feel a little tender or look pink.	Cuticle oil tonight. Gloves for dishes and cleaning. Let polish set fully.	Hot tubs and harsh cleaners. Picking at any tender spot or fresh polish.
Days 1–7 settling in	Polish is fully hard after about [24] hours. Skin feels smooth and soft.	Oil cuticles daily. Hand cream after washing. Gloves for chores and gardening.	Biting, picking or cutting cuticles. Using nails to open cans or scrape labels.
Weeks 2–3 regrowth	Cuticle slowly grows back. A little dryness at the edges is normal.	After a shower, push cuticles back gently with a towel. Smooth snags with a fine file.	Clippers on living skin. Peeling polish off, which lifts layers of your nail.
2–4 wks next visit	Polish chips at the tips and the cuticle line softens.	Book your next manicure. Tell me about health or medication changes.	Waiting too long. Dry, overgrown cuticles split into painful hangnails.

Your cuticles

Your cuticle seals the base of your nail against germs. Keep it soft with oil, push it back gently, and leave any trimming to me so living skin is never cut.

GOOD TO KNOW

- Oil soaks in best right after washing your hands
- File in one direction to avoid splitting
- Choose an acetone-free remover for polish
- Hangnail? Clip only the loose tip, never pull it
- Top coat every few days helps polish last
- A dark streak or lifting nail should be checked

Oil daily
Cuticle oil morning and night keeps skin supple.

Wear gloves
Dish soap and cleaners dry out nails and skin.

Hands off
No biting, picking or cutting between visits.

Jewels, not tools
Don't pry, scrape or open cans with nails.

CALL ME RIGHT AWAY IF YOU NOTICE

- Redness, swelling or warmth around a nail
- Red streaks spreading from a finger
- Throbbing, pus, or pain that gets worse
- A nick that hasn't healed in a few days

Pus, red streaks, fever or spreading redness: please see your doctor.

Diabetes or poor circulation: any wound that is slow to heal, see your doctor the same day.

YOUR NEXT MANICURE _____

GETTING READY

Before Your Nail Appointment

For gel, acrylic, extensions, dip, manicures and pedicures. A little prep helps your nails look their best and last longer.

YOUR LOGO

NAME

APPOINTMENT DATE & TIME

SERVICE

1 week
before

Wearing gel, acrylic or dip? Book a removal with your service, or soak off safely at home.

Start cuticle oil daily. Healthy cuticles give a cleaner, longer-lasting finish.

Skip cutting or filing your nails short; I'll shape them.

Ever had itching or a rash from nail products? Tell me before you book.

48 hours
before

Pedicure: don't shave, wax or use hair removal cream on your legs for [24–48] hours.

Don't pick, peel or bite old product; it pulls off layers of your nail.

Check your hands and feet for cuts, redness or anything new.

Day of
your appointment

Come with clean, bare nails, or with your removal booked.

Skip hand cream and oil that day, or wash it off first. Product won't stick to oily nails.

Bring inspiration photos for shape, length and art.

Wear open-toe shoes for a pedicure.

Gel & acrylic

· Extensions and dip too: come with bare nails, or book removal time.

· Length or design changes on the day may change time and price.

· Fills every [2–4] weeks keep them strong.

· SPF or UV gloves are available for lamp curing.

Pedicure

· No shaving, waxing or hair removal for [24–48] hours before.

· Reschedule with cuts, scratches, bug bites or foot fungus.

· Diabetes or poor circulation? Tell me first.

· Tell me about ingrown or painful toenails.

· Gel toes: bring open-toe shoes.

Manicure & nail art

· Nail art is priced by design; photos help me quote.

· Please don't cut your cuticles at home first.

· Tell me about thin, peeling or damaged nails.

· Detailed art needs extra time; book it ahead.

PLEASE TEXT TO RESCHEDULE IF YOU HAVE

· Redness, swelling or pus around a nail
· Cuts, broken skin or an eczema flare
· A green or dark spot under a nail
· Nail fungus or athlete's foot
· Itching or a rash after a past nail service
· A fever, cold or flu, or feel unwell

I ask for [24] hours' notice. If it's about your health or safety, just text. We'll find a new time together.

Important

Pregnant? It's not an automatic no. Some nail products have strong odors; I use ventilation at my table, and if odors bother you, a natural manicure or regular polish is a lovely option. It's your choice, so tell me and we'll plan together.

REMOVAL NEEDED?

NO LEG SHAVING FROM

NOTES FOR YOU

AFTERCARE · NAIL GUIDE

Your Nail Care Guide

Healthy nails hold gel, acrylic and art best. Here's how to care for them between visits, how long each service lasts and when to call me.

YOUR LOGO

Daily routine

Oil, moisture, gentle hands

CUTICLE OIL
Massage into cuticles and under the free edge [1–2] times a day.

HAND CREAM
After washing. Dry skin and nail folds make product lift sooner.

DRY WELL
Pat around each nail after washing. Trapped water causes lifting.

FILING
Natural nails only: a fine (180+) file, in one direction.

Protect

Water, chemicals & habits

GLOVES
For dishes, cleaning and gardening. Water and chemicals weaken product.

JEWELS, NOT TOOLS
Don't open cans, scrape labels or pry with your nails.

HANDS OFF
Never pick, peel or bite product; it pulls off layers of your nail.

REMOVERS
Keep acetone and polish remover off your gel or acrylic.

How long it lasts

With good home care

GEL POLISH
[2–3] weeks. Builder gel infills every [3–4] weeks.

ACRYLIC
Fills every [2–3] weeks as your nails grow.

GEL EXTENSIONS
A fill or new set every [3–4] weeks. Hard gel is filed off, not soaked.

DIP POWDER
[3–4] weeks, then removal and a fresh set.

FIRST 24 HOURS
Skip hot tubs, saunas and long hot soaks for [24] hours.

LIFTING OR A BREAK?
Book a fix within [5–7] days. Please don't glue at home.

PEDICURE
Gel toes last about [4–6] weeks; regular polish [1–2].

Safe removal

A professional soak-off or file-off. Never pry or peel.

Fills on time

Overdue fills strain your nail and invite lifting.

Healthy nails

Smooth, pink nail beds and no soreness.

Ask first

Trying a new product? Text me first.

THIS IS NORMAL

- Mild dryness after acetone removal
- A brief warm feeling in the lamp as gel cures
- Natural nails feeling a little thin after removal
- Light staining from dark or bright shades
- Growth showing at the cuticle after [2–3] weeks
- Faint white spots from bumps (they grow out)

CALL ME IF YOU NOTICE

- Itching, redness or a rash near nails, eyelids or face
- A red, swollen, painful or pus-filled nail fold
- A green or dark spot under your nail or product
- Lifting, cracks, or a nail separating from its bed
- Pain or throbbing that lasts after your service
- A new dark streak in a nail (see a dermatologist)

Call 911 for trouble breathing or a swollen face or throat. Product in your eye? Flush 15 minutes, then get **urgent care**.

Possible allergy? Have the product removed, see a doctor and tell me. Allergies can start after years of safe use.

NOTES

PRACTITIONER REFERENCE

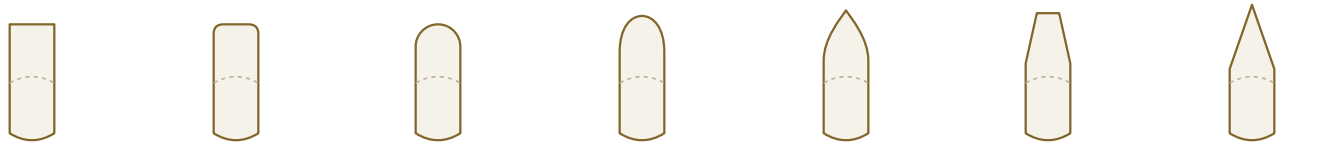

Nail Systems Cheat Sheet

Pick the right system, cure it fully, and keep product off the skin.

Systems compared

SYSTEM	SETS BY	WEAR	STRENGTH	REMOVAL	FILL / REDO	ALLERGY & SAFETY
Gel polish	LED/UV cure	[2–3] wk	Flexible; adds little strength	Soak-off	New set [2–3] wk	Methacrylates, often HEMA. Keep off skin.
Builder gel	LED/UV cure	[3–4] wk	Medium; some flex	Soak- or file-off	Infill [3–4] wk	Thick layers need the full cure time.
Hard gel	LED/UV cure	[3–4] wk	Strong; rigid	File-off only	Rebalance [3–4] wk	Heavy dust: use extraction and a mask.
Soft gel tips	LED/UV cure	[3–4] wk	Light; flexible	Soak-off	New set [3–4] wk	Gel adhesive is a methacrylate too.
Acrylic	Air-sets	[2–3] wk	Strongest; rigid	Acetone soak	Fill [2–3] wk	EMA liquid only, never MMA. Ventilate.
Dip powder	Activator	[3–4] wk	Strong; fairly rigid	File top, then soak	New set [3–4] wk	Cyanoacrylate. Single-use powder portions.

Nail shapes

Square — Wide, strong

Squoval — Soft corners

Round — Follows tip

Oval — Classic

Almond — Soft point

Coffin — Aka ballerina

Stiletto — Needs length

File grit guide

GRIT	TYPE	USE FOR
80–100	Coarse	Enhancements only: bulk removal and reshaping. Never the natural nail.
150–180	Medium	Refining enhancements; 180 for shaping a natural free edge.
180–240	Fine	Natural nail shaping and light shine removal before product.
240+	Extra fine, buffer	Smoothing, buffing and finishing. Don't overfile the plate.

LAMP & CURE

- **Match the lamp** to the gel brand.
- Thin coats; cure each for the full stated time.
- Check output; replace bulbs as the maker advises.
- Under-cured gel is the main allergy route.
- Offer SPF 30+ (20 min before) or UV gloves.

E-FILE BIT BASICS

- **Trained use only.** Low to moderate speed.
- Coarse bits: product only, never the plate.
- Keep the bit moving and flat; stop at any heat.
- Sanding bands are single-use.
- Clean, then disinfect bits after every client.

Every time. Follow every manufacturer's instructions; check gels are legal where you work (EU/UK: TPO-free).

[1] On the area: defer; refer to a doctor or podiatrist.
[2] Red, swollen, painful fold: no service; see a doctor.
[3] Likely bacterial. Remove product; none until clear.
[4] Contagious. Work around them; discard files; refer.
[5] No product or soaking on broken skin until healed.
[6] Wait for the flare to settle; ask a dermatologist.
[7] Wait until healed; no pressure on the nail.
[8] Don't cover it. Dermatologist check first.
[9] No (meth)acrylates. Dip: check every product's SDS.
[10] Use forms, not glued tips. No dip base or activator.
[11] No cutting; lukewarm water. Doctor OK: pedi, e-file.
[12] Check feet; no cutting or coarse filing. Physician OK.
[13] Bruises and bleeds easily: no cutting, light pressure.
[14] Higher infection risk. Physician OK; no cutting.
[15] Not an automatic no. Ventilate; client preference.
[16] Offer UV gloves or SPF 30+, or a non-gel service.
[17] Nicks raise foot spa infection risk. Reschedule.
[18] Remove fully first; MMA won't soak off. Fee [$].
[19] Parent or guardian consent required [policy].

Conservative defaults; check your state board rules. Manufacturer instructions, state rules and the client's physician, dermatologist or podiatrist come first. Don't patch test acrylates yourself; refer to a dermatologist.
