AFTERCARE

Caring for Your Nails

Neat cuticles and smooth nails last longer with a little daily care. These simple habits keep your nails strong until your next visit.

YOUR LOGO

WHEN	WHAT'S NORMAL	DO	AVOID
Today fresh cuticles	A crisp cuticle line. Skin may feel a little tender or look pink.	Cuticle oil tonight. Gloves for dishes and cleaning. Let polish set fully.	Hot tubs and harsh cleaners. Picking at any tender spot or fresh polish.
Days 1–7 settling in	Polish is fully hard after about [24] hours. Skin feels smooth and soft.	Oil cuticles daily. Hand cream after washing. Gloves for chores and gardening.	Biting, picking or cutting cuticles. Using nails to open cans or scrape labels.
Weeks 2–3 regrowth	Cuticle slowly grows back. A little dryness at the edges is normal.	After a shower, push cuticles back gently with a towel. Smooth snags with a fine file.	Clippers on living skin. Peeling polish off, which lifts layers of your nail.
2–4 wks next visit	Polish chips at the tips and the cuticle line softens.	Book your next manicure. Tell me about health or medication changes.	Waiting too long. Dry, overgrown cuticles split into painful hangnails.

Your cuticles

Your cuticle seals the base of your nail against germs. Keep it soft with oil, push it back gently, and leave any trimming to me so living skin is never cut.

GOOD TO KNOW

- Oil soaks in best right after washing your hands
- File in one direction to avoid splitting
- Choose an acetone-free remover for polish
- Hangnail? Clip only the loose tip, never pull it
- Top coat every few days helps polish last
- A dark streak or lifting nail should be checked

Oil daily
Cuticle oil morning and night keeps skin supple.

Wear gloves
Dish soap and cleaners dry out nails and skin.

Hands off
No biting, picking or cutting between visits.

Jewels, not tools
Don't pry, scrape or open cans with nails.

CALL ME RIGHT AWAY IF YOU NOTICE

- Redness, swelling or warmth around a nail
- Red streaks spreading from a finger
- Throbbing, pus, or pain that gets worse
- A nick that hasn't healed in a few days

Pus, red streaks, fever or spreading redness: please see your doctor.

Diabetes or poor circulation: any wound that is slow to heal, see your doctor the same day.
